Legal Notices

We offer information as a service to you. The provided information is based on your requirements and we make every effort to ensure its quality. You agree that you are responsible for using independent analysis and evaluation in designing intended products, and we provide reference designs for illustrative purposes only. Before using any hardware, software or service guided by this document, please read this notice carefully. Even though we employ commercially reasonable efforts to provide the best possible experience, you hereby acknowledge and agree that this document and related services hereunder are provided to you on an “as available” basis. We may revise or restate this document from time to time at our sole discretion without any prior notice to you.

Use and Disclosure Restrictions

License Agreements

Documents and information provided by us shall be kept confidential, unless specific permission is granted. They shall not be accessed or used for any purpose except as expressly provided herein.

Copyright

Our and third-party products hereunder may contain copyrighted material. Such copyrighted material shall not be copied, reproduced, distributed, merged, published, translated, or modified without prior written consent. We and the third party have exclusive rights over copyrighted material. No license shall be granted or conveyed under any patents, copyrights, trademarks, or service mark rights. To avoid ambiguities, purchasing in any form cannot be deemed as granting a license other than the normal non-exclusive, royalty-free license to use the material. We reserve the right to take legal action for noncompliance with abovementioned requirements, unauthorized use, or other illegal or malicious use of the material.

Trademarks

Except as otherwise set forth herein, nothing in this document shall be construed as conferring any rights to use any trademark, trade name or name, abbreviation, or counterfeit product thereof owned by Quectel or any third party in advertising, publicity, or other aspects.

Third-Party Rights

This document may refer to hardware, software and/or documentation owned by one or more third parties ("third-party materials"). Use of such third-party materials shall be governed by all restrictions and obligations applicable thereto.

We make no warranty or representation, either express or implied, regarding the third-party materials, including but not limited to any implied or statutory, warranties of merchantability or fitness for a particular purpose, quiet enjoyment, system integration, information accuracy, and non-infringement of any third-party intellectual property rights with regard to the licensed technology or use thereof. Nothing herein constitutes a representation or warranty by us to either develop, enhance, modify, distribute, market, sell, offer for sale, or otherwise maintain production of any our products or any other hardware, software, device, tool, information, or product. We moreover disclaim any and all warranties arising from the course of dealing or usage of trade.

Privacy Policy

To implement module functionality, certain device data are uploaded to Quectel's or third-party's servers, including carriers, chipset suppliers or customer-designated servers. Quectel, strictly abiding by the relevant laws and regulations, shall retain, use, disclose or otherwise process relevant data for the purpose of performing the service only or as permitted by applicable laws. Before data interaction with third parties, please be informed of their privacy and data security policy.

Disclaimer

- a) We acknowledge no liability for any injury or damage arising from the reliance upon the information.
- b) We shall bear no liability resulting from any inaccuracies or omissions, or from the use of the information contained herein.
- c) While we have made every effort to ensure that the functions and features under development are free from errors, it is possible that they could contain errors, inaccuracies, and omissions. Unless otherwise provided by valid agreement, we make no warranties of any kind, either implied or express, and exclude all liability for any loss or damage suffered in connection with the use of features and functions under development, to the maximum extent permitted by law, regardless of whether such loss or damage may have been foreseeable.
- d) We are not responsible for the accessibility, safety, accuracy, availability, legality, or completeness of information, advertising, commercial offers, products, services, and materials on third-party websites and third-party resources.

1 Introduction

Usually, shutdown takes too long, and sometimes the module may be powered off abnormally, which may cause file system damage. In order to resolve this issue, Quectel has implemented a fast shutdown feature which can reduce shutdown time to less than 100 ms without damaging the file system. However, note that the data to be written into the internal flash may be lost due to fast shutdown.

Two methods for enabling the fast shutdown feature are introduced in this document.

- Execute **AT+QCFG="fast/poweroff"** (See *document [1]*) and pull down the pin of the module. When the module detects a falling edge, it will complete the current access and stop writing new data into the file system, and then cut off the power supply.
- Execute **AT+QPOWD=2** (See *document [2]*) to shut down the module immediately without waiting for pin pull-down.

This document explains the fast shutdown feature and how to use it.

2 Fast Shutdown Mechanism

2.1. Fast Shutdown Triggered by Pin

AT+QCFG="fast/poweroff" configures a dedicated GPIO pin (see [document \[3\]](#) for details) as an input pin with internal pull-up and interrupt features. The interrupt feature is triggered by a falling edge. The module will finish the current process of writing the data into the flash block, and the remaining data that are waiting to be written will be discarded. After the current data writing process is completed, the file system cannot be accessed anymore, and the power supply will be cut off.

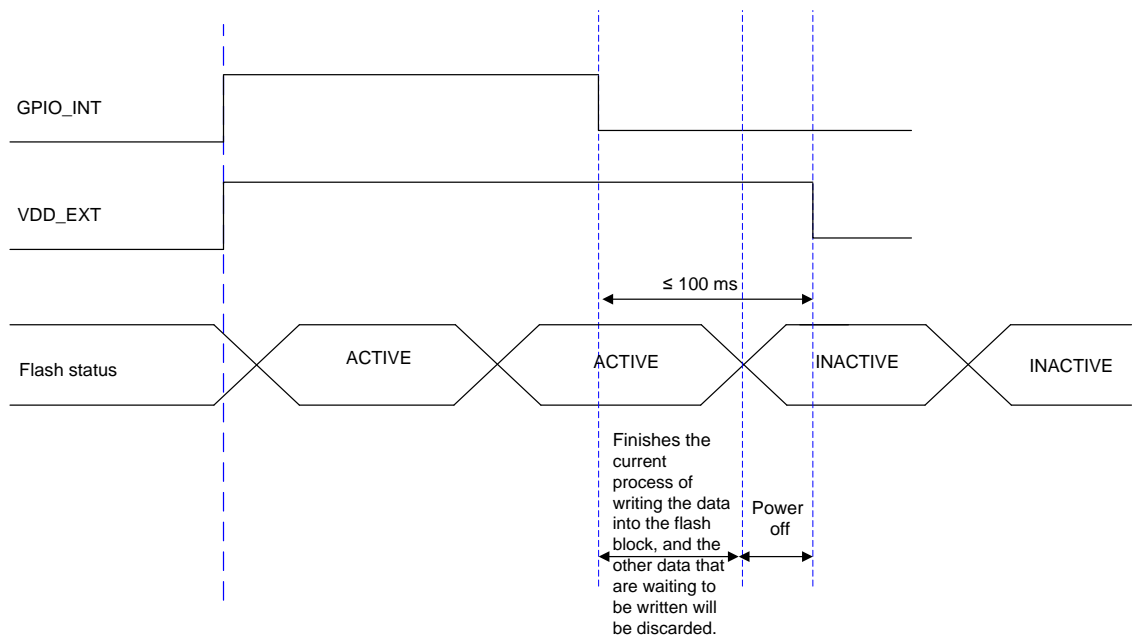

Figure 1: Fast Shutdown Timing

2.2. Fast Shutdown Triggered by AT Command

AT+QPOWD also triggers fast shutdown. When this command is executed, the fast shutdown procedure is the same as above.

3 Fast Shutdown AT Commands

3.1. AT Command Introduction

3.1.1. Definitions

- **<CR>** Carriage return character.
- **<LF>** Line feed character.
- **<...>** Parameter name. Angle brackets do not appear on the command line.
- **[...]** Optional parameter of a command or an optional part of TA information response. Square brackets do not appear on the command line. When an optional parameter is not given in a command, the new value equals its previous value or the default settings, unless otherwise specified.
- **Underline** Default setting of a parameter.

3.1.2. AT Command Syntax

All command lines must start with **AT** or **at** and end with **<CR>**. Information responses and result codes always start and end with a carriage return character and a line feed character: **<CR><LF><response><CR><LF>**. In tables presenting commands and responses throughout this document, only the commands and responses are presented, and **<CR>** and **<LF>** are deliberately omitted.

Table 1: Types of AT Commands

Command Type	Syntax	Description
Test Command	AT+<cmd>=?	Test the existence of the corresponding command and return information about the type, value, or range of its parameter.
Read Command	AT+<cmd>?	Check the current parameter value of the corresponding command.
Write Command	AT+<cmd>=<p1>[,<p2>[,<p3>[...]]]	Set user-definable parameter value.
Execution Command	AT+<cmd>	Return a specific information parameter or perform a specific action.

3.2. Declaration of AT Command Examples

The AT command examples in this document are provided to help you learn about the use of the AT commands introduced herein. The examples, however, should not be taken as Quectel's recommendations or suggestions about how to design a program flow or what status to set the module into. Sometimes multiple examples may be provided for one AT command. However, this does not mean that there is a correlation among these examples, or that they should be executed in a given sequence. The URLs, domain names, IP addresses, usernames/accounts, and passwords (if any) in the AT command examples are provided for illustrative and explanatory purposes only, and they should be modified to reflect your actual usage and specific needs.

3.3. Description of Fast Shutdown AT Commands

3.3.1. AT+QCFG="fast/poweroff" Enable/Disable Fast Shutdown Function

This command enables or disables the fast shutdown function triggered by a dedicated pin.

AT+QCFG="fast/poweroff" Enable/Disable Fast Shutdown Function	
Test Command AT+QCFG=?	Response +QCFG: "fast/poweroff",<pin>,(list of supported <enable>s) OK
Write Command AT+QCFG="fast/poweroff"[,<pin>,<enable>]	Response If the optional parameters are omitted, query the current configuration: +QCFG: "fast/poweroff",<pin>,<enable> OK If the optional parameters are specified, configure GPIO for fast shutdown: OK If there is any error: ERROR
Maximum Response Time	300 ms
Characteristics	The command takes effect immediately. The configuration is saved automatically.

Parameter

<pin>	Integer type. Pin number of a dedicated GPIO which is configured as an input pin with internal pull-up and interrupt features. The dedicated pin is triggered by a falling edge for fast shutdown.
	25 Pin 25 (GPIO1)
<enable>	Integer type. Enable or disable fast shutdown function.
	0 Disable
	1 Enable

Example

```

AT+QCFG="fast/poweroff",25,1 //Configure pin 25 (GPIO1) as the fast shutdown pin and enable
                              the fast shutdown function.

OK
AT+QCFG="fast/poweroff"      //Query the current configuration.
+QCFG: "fast/poweroff",25,1 //Pin 25 (GPIO1) is configured as the fast shutdown pin, and the
                              fast shutdown function is enabled.

OK

```

3.3.2. AT+QPOWD Power off the Module

This command powers off the module. When the command is executed successfully, the UE immediately returns **OK** and deactivates the network. After that, the UE sends the **POWERED DOWN** message and enters power-off state. The maximum time for unregistering from the network is 60 s. If you use immediate or normal power-down, to avoid data loss, the module needs to remain connected to the power supply until it sends the **POWERED DOWN** message and sets the STATUS pin to low.

AT+QPOWD Power off the Module	
Test Command AT+QPOWD=?	Response +QPOWD: (list of supported <n>s) OK
Write/Execution Command AT+QPOWD[=<n>]	Response OK POWERED DOWN
Maximum Response Time	300 ms
Characteristics	The command takes effect immediately. The configuration is not saved.

Parameter

<n>	Integer type. Shutdown mode.
0	Immediate power-down
<u>1</u>	Normal power-down
2	Fast shutdown

NOTE

1. The fast shutdown time is less than 100 ms.
2. If the CMUX interface is used, there is no **POWERED DOWN** response.
3. If **<n>** is 2, there is no **POWERED DOWN** response.

4 Typical Application

In some usage scenarios, the power supply of the module may be cut off suddenly during the writing of the data into the file system. It may cause file system damage. In order to avoid this issue, you can add a supper capacitor, which can extend discharge time in the event of external voltage drop, to ensure that the module continues to work for more than 100 ms after the power supply is cut off. When the external MCU detects the powering down, it must pull down the fast shutdown pin and the module will be powered off within 100 ms.
