

Cristian's {Design Portfolio}

I'm Cristian Villalobos. Originally from Michoacán Mexico now residing in Central Washington, a first-generation student with a Bachelors in Visual Communication Design from Eastern Washington University.

Learned from studying how others solve problems, asking questions, and helping peers. Working with the Spokane community taught me to listen first, collaborate across backgrounds, and stay ethically accountable. I care about making ideas clear and helping people know exactly what to do next. My interest in coding led me to front-end web development, where I enjoy bringing ideas to life through design, interactivity, and problem-solving.

Google Doodle

Original Version

Jan, 2025 - Mar, 2025

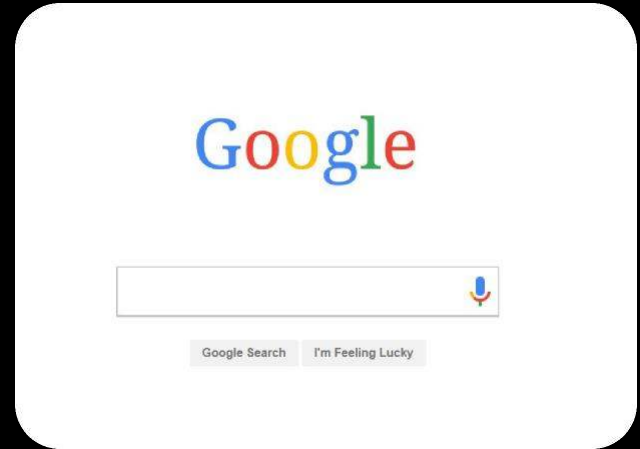

Revised Attempt: (Completed)

October, 2025 - December, 2025

Concept: For this project, I had to make my own version of a Google Doodle. The idea was to redesign the Google logo in a creative way that shows emotion or tells a story. Google makes Doodles to make their homepage more fun and interesting.

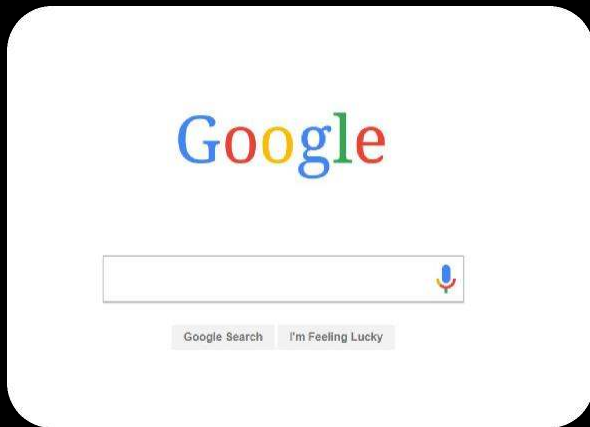

Tools:

- Github
- Codepen
- Figma

First Attempt

Before Interacting

```
html, body {  
  height: 100%;  
}  
  
body {  
  width: 100%;  
  margin: 0;  
  display: flex;  
  align-items: center;  
  justify-content: center;  
}  
  
#search {  
  text-align: center;  
}  
  
button {  
  display: inline-block;  
  background-color: #f2f2f2;  
  border: 1px solid #f2f2f2;  
  border-radius: 2px;  
  color: #757575;  
  cursor: default;  
  font-family: arial, sans-serif;  
  font-size: 1em;  
  font-weight: bold;  
  padding: .5em 1em;  
  text-align: center;  
}
```

The word ' Google' was the only visual I had . It acted as the base element where all interaction was meant to happen,

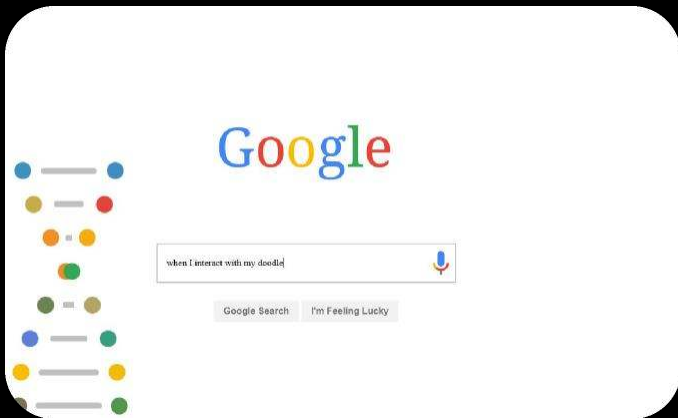

```
<input type="text" />  
<div id="search">  
  <button>Google Search</button>  
  <button>I'm Feeling Lucky</button>  
</div>
```

```
#stage {  
  background: #ffffff;  
  height: 300px;  
  width: 600px;  
  overflow: hidden;  
  position: relative;  
}
```

Here I' m showing part of the code that defines the invisible stage where the doodle interaction was supposed to happen. The " Google" SVG sat in that space, but visually, nothing else was being triggered yet

My Issue

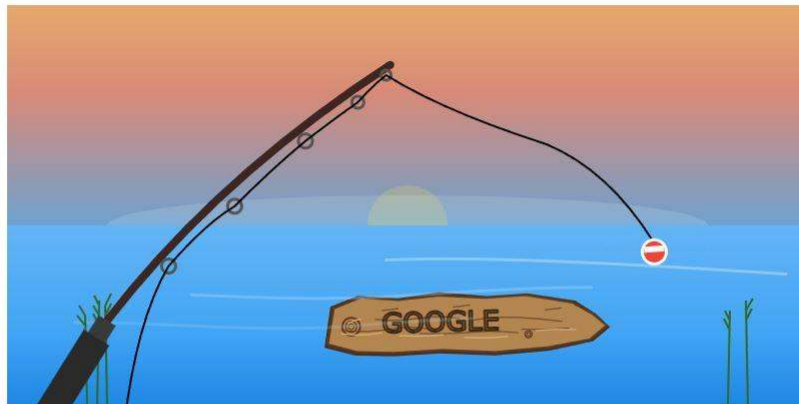

The main issue was that when interacting didn't stay inside the box where it was supposed to happen. Even though I had a stage set up in the code. The doodle elements would move across the page instead. You can see in the code here that the interaction wasn't being constrained, which made the experience hard to control

```
function randomFloatDNA() {  
  const stageWidth = stage.offsetWidth;  
  const stageHeight = stage.offsetHeight;  
  
  const randomX = Math.random() * (stageWidth + 800);  
  const randomY = Math.random() * (stageHeight + 800);  
  
  moveTween = gsap.to(dna, {  
    x: randomX,  
    y: randomY,  
    duration: Math.random() * 2 + 2,  
    ease: 'sine.inOut',  
    onComplete: randomFloatDNA  
  });  
}
```

Re Design

Instead of forcing the DNA strand concept, I decided to redesigned the doodle around a fishing theme. This allowed me to simplify the interaction, keep everything contained in the stage, and create a clearer and more playful starting state.

Google Search

I'm Feeling Lucky

Latest Version

This shows the current iteration of the project as I continue refining my skills and approach

Eagles Lube

Project

April, 2025 - June, 2025

Concept: SEP Eagles Lube was a freelance project where I designed a responsive landing page for a real client. The goal was to keep the design clean, easy to use, and consistent with their brand, while making sure it worked well across different screen sizes.

Tools:

- Github
- Figma
- Codepen

Homepage Information

What happens to be the problem

Need *an Oil Change?*

At Eagles Lube, we're committed to keeping your vehicle running smoothly and safely. Whether you need a quick oil change, a thorough diagnostic check, or brake services, here to provide fast, reliable care. We pride ourselves on quality service and customer satisfaction, ensuring every visit leaves you confident and ready to hit the road.

Services

b

```
<section class="home">
  <div class="home-info">
    <h1>What happens to be the problem</h1>
    <h2>Need
      <span style="--i:4;" data-text="a Replacemt?">a Replacemt?</span>
      <span style="--i:3;" data-text="an Oil Change?">an Oil Change?</span>
      <span style="--i:2;" data-text="a Diagnostic Check?">a Diagnostic Check?</span>
      <span style="--i:1;" data-text="Brake Services?">Brake Services?</span>
    </h2>
  </div>
</section>
```

On the homepage, I focused on making the most important information easy to find, like services and contact details. The layout is designed so users immediately know what the business offers and what to do next

```
<div class="btn-sci">
  <a href="https://www.instagram.com/eagleslube/" class="btn">Services</a>
  <div class="sci">
    <a href="mailto:Eagleslube60@gmail.com"><i class="bx bxl-gmail"></i></a>
    <a href="https://www.instagram.com/eagleslube/"><i class="bx bxl-instagram"></i>
  </div>
</div>

<div class="home-img">
  <div class="img-box">
    <div class="img-item">
      
    </div>
  </div>
</div>
```

Visual Enhancement

I added a small animated accent around the logo. The animation is subtle and meant to add visual interest without distracting from the content or the brand

```
.home-img .img-box::before,  
.home-img .img-box::after {  
  content: '';  
  position: absolute;  
  width: 500px;  
  height: 500px;  
  background: conic-gradient(transparent, transparent, transparent, hsl(348, 83%, 47%, 1));  
  transform: rotate(0deg);  
  animation: rotate-border 10s linear infinite;  
  z-index: 0; /* Behind everything */  
}  
  
.home-img .img-box::after {  
  animation-delay: -5s;  
}  
  
@keyframes rotate-border {  
  100% {  
    transform: rotate(360deg);  
  }  
}
```

Finished Result

GOTV

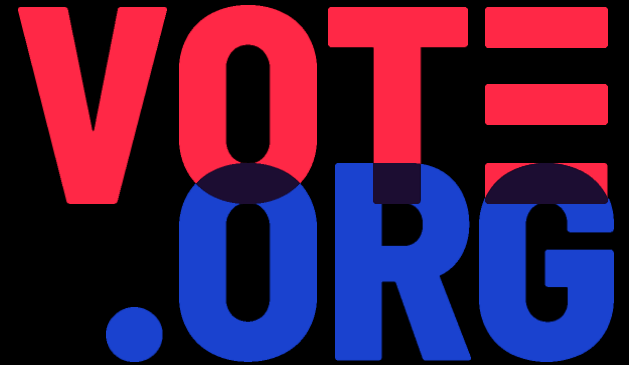

Get Out the Vote

September, 2024 – November, 2024

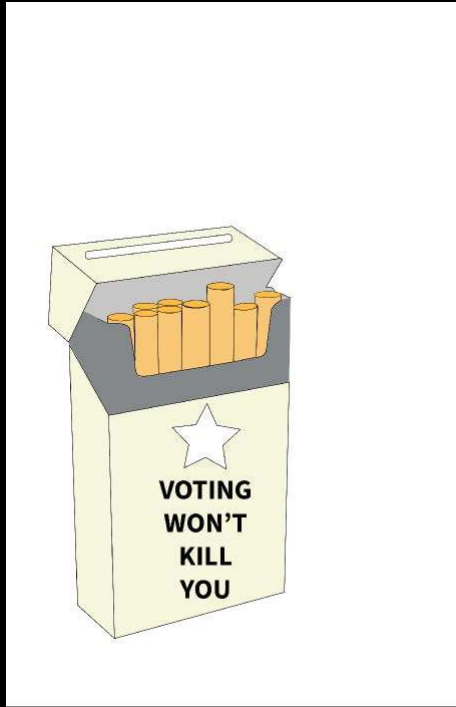

Concept: For this project, I created a nonpartisan Get Out the Vote poster aimed at encouraging EWU students to register and participate in elections. The focus was on using illustration and clear visual messaging to motivate civic engagement without political bias.

Tools:

- Adobe Illustrator
- Milanote

The logo for VOTE.ORG is displayed in a bold, sans-serif font. The word "VOTE" is in red, and ".ORG" is in blue. The letters are thick and blocky, with a slight overlap between the "VOTE" and ".ORG" parts.

Early Concepts

I tested different illustration ideas before choosing a final direction. I ended up going with the secondhand smoke concept because it clearly communicates that voting affects everyone, even if you choose not to participate, while staying nonpartisan.

Finished Result

**Voting's like
secondhand smoke.
Even if you don't do it,
you're still going to
feel the effects!**
