EXECUTIVE SUMMARY

SCORE: 93/100

Financials: 17/20 | Contract 36/40 | KYC 40/40

The audit of the project "The Hive Mind" conducted by Saint & Martin, gives them a total score of 93/100. This audit includes a comprehensive analysis of not only the contract, but the entire project that we currently have access to during this migration. This includes smart contracts, wallet distribution and outflows, deep diving into project authenticity, and tokenomics.

Key findings:

- ✓ **Wallet distribution analysis:** Wallet distribution analysis: Concerning the previous Contract Address. As of May 31st, 2024, there are 224 HIVE holders, with top 10 wallets holding 6.75% of the supply. The top wallet holds 1 billion HIVE (\$9.12k). A total of 52.28 billion HIVE tokens (52.28%) were burned. Taxes collected amount to 1.41 ETH, with a current liquidity/market cap percentage of 31.39%. New taxes will have 1% go to burning, 1% to marketing, and 1% to liquidity.
- ✓ **Not a Honeypot:** The current contract is **NOT** a honeypot. The owner has taken extra steps to ensure that the contract is both safe and has cheap gas fees. Even if the project were to remain unrenounced, these steps taken would help prevent this contract from being able to ever turn into a honeypot as taxes and other such variables remain immutable.
- ✓ **Fixed supply:** Contract is set to mint during constructor only, so no new coins can be added. 100 billion coins will be minted during the initial phase.
- ✓ **Transparency:** Financials were thoroughly combed through following transactions out of the CA and tax wallets. Nothing out of the ordinary was found. No attempts were made to hide any funds or usages.
- ✓ **Security measures:** Several low and informational security issues have been identified in the application. These have been communicated to the developer to be handled at their discretion.
- ✓ **Team & Project background check:** Project lead is very active within the community, shares his work, and also images of himself. He has met several of the people from the community in real life as well, thus doxxing himself. There were no red flags in the background check conducted.

Wallet Distribution and Outflows

***All categories listed from PAST CA may help give insight to possible activities on the MIGRATION CA, but do not represent guarantees.**

- 224 holders (As of May 31st, 2024)
- Multiple bundled wallets. Many between 3-4 wallets each containing 200 million HIVE or less. One bundle of 14 wallets with same makeup
- Top 10 wallets contain 6.75% of total supply
- Top 10 wallets individually hold between 1.0% and 0.449% of the total supply
- Top wallet holds 1 billion HIVE worth \$9.12k
- 1.41 ETH in taxes has been collected thus far
- Current liquidity/market cap percentage is 31.39%
- 52,279,230,595 HIVE tokens burned (52.28%) in previous CA
- 2 Total Telegram KOLs (As of May 28th 2024)
- New Contract Taxes:
 - 1% to Burning
 - 1% to Liquidity
 - 1% to Marketing
 - These fees CANNOT be altered as they are hard-coded into the contract
- Tax wallets
 - 0xF9ad63b26fd5806642357991b182F0Cd69034A6b Marketing Tax Wallet
- Liquidity is locked, but it was accidentally sent through vesting instead
 - This may lead to confusion with scanners and new buyers
 - [Etherscan/vesting transaction link](#)
- Owner wallet: 0x3a4d5be444a905bf15c8571470f2b62268f4e4fc
- There is no team wallet

General Checks

- Funds were followed looking back through the CA and tax wallets in order to ensure proper use and nothing that would give concern to investors. Everything was managed appropriately by the owner. For example:

Wallet 0x8280b9d811061B56E1a2053c850d6945C8106b3E sent 31k to
Wallet 0x2c713CA3b4953aD1aC39e2CEc52213FBBAeE839B sent 30k to
Wallet 0x91B54833Bacc47f2f5d11104De6C15b6EA7b40cf which sent 30k to
Wallet 0x0aaaaE21BC91e5C57DD8E0A87a91740b7A12d70e (One step away from MOST RECENT CA)

Multiple payments were then made in relation to the project and the creation of the Hive Cannon with these funds.

- Owner is extremely active and easy to reach. Quickly responds as needed. Telegram chat is incredibly lively and resembles that of a meme coin at a much higher market cap.

- No similar contracts found from other projects

- Cannon Fires:

-@0x202447 (\$TRUMP)	#0x202447
-@XenoWaveAI	\$XWAVE
-@TeamZkLock	\$ZKLK
-@BraceNetwork_	\$BRACE
-@theneurahub	\$NEURA (Fired twice)
-@GrowTheHive	\$HIVE

- Socials:

Manual Contract Review

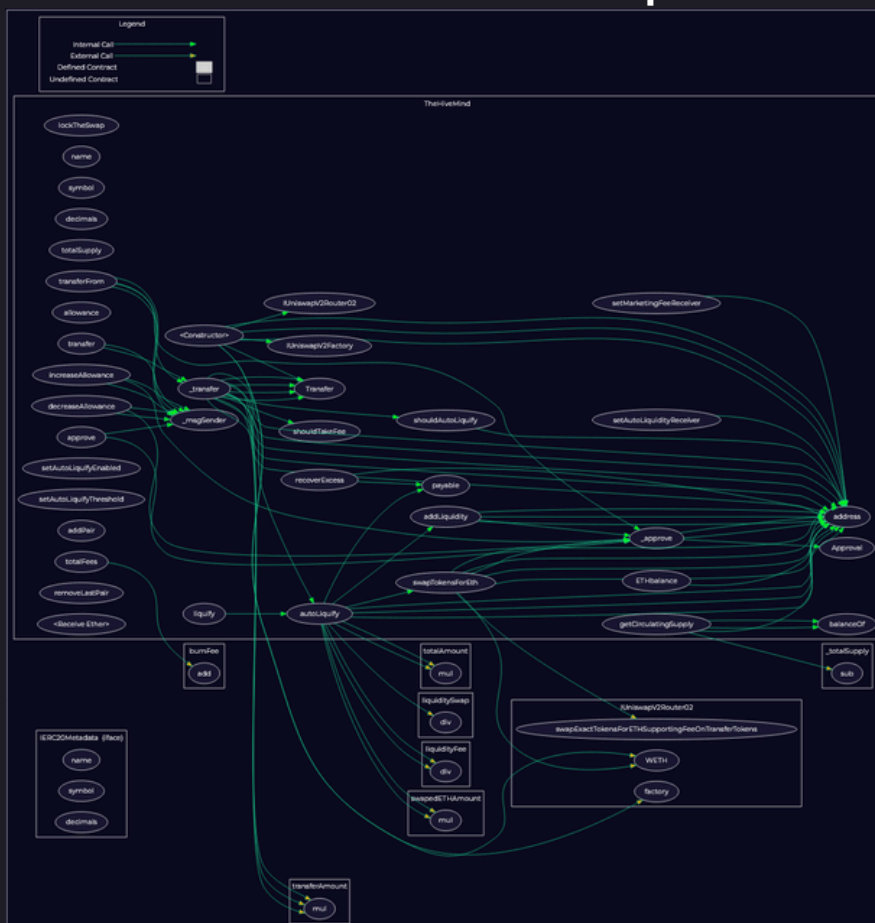

- **100 Billion Supply**
- **Taxes: Total = 3%**
 - Burn Fee = 1%**
 - Marketing Fee = 1%**
 - Liquidity Fee = 1%**
- **No Updating Taxes**
- **No Whitelist**
- **No Blacklist**
- **No Burn (handled in Transactions only)**
- **No Mint (handled in Constructor only)**
- **No Trading Cooldown**
- **Can Update Wallets**
- **All functions have proper modifiers**
 - External onlyOwner was used as appropriate in order to further save on gas costs in this contract.**
- **The contract is not renounced, however, even if not renounced there is nothing negative that could be done as seen above. It would still be recommended to renounce for the sake of scores on automated scanning sites.**
- **PREVIOUS CA Gas: Buy 183,944 / Sell 112,384**
- **NEW CA Gas: Buy 168,208 / Sell 110,755**

Manual Contract Review

Vulnerabilities

- The contract uses `msg.sender` instead of `tx.origin` for authorization so as to avoid any **AUTHENTICATION** vulnerabilities.
- The contract utilizes Safe Math Library to ensure no **INTEGER OVERFLOW** and **UNDERFLOW** vulnerabilities.
- There are no calls to untrusted contracts that would make it vulnerable to **REENTRANCY ATTACKS**.
- There is risk due to **CENTRALIZED CONTROL**, however, this is a one man team and thus proper discretion has been taken into consideration as there are no other team members to rely on. Although there is not much that can be accessed within the contract, a multi-signature wallet could still be used to help prevent breaches as someone could gain access then alter tax wallets before renouncing.
- The contract is vulnerable to front running.
- This contract has been checked for a multitude of other common vulnerabilities and has passed.

Function Flow Map

Background Checks

We conducted a background check on The Hive Mind, reviewing their digital footprints including wallets, websites, and any earlier projects. Our investigations did not reveal any concerns, indicating no red flags with their operations or history. These thorough checks provides assurance of their transparency!

The Hive Mind has successfully completed their KYC with Innovia Trust. The rigorous nature of Innovia Trust's verification process, which includes identity checks and anti-fraud measures, lends significant credibility to this validation. In addition to our KYC process, we have discovered mutliple accurate photos shared of the owner along with many personal details as he doxxed himself to his community. There are also instances of community members meeting with the owner in real life as well, further exemplifying his commitment to transparency.

Team Owner KYC'd:

@Mudd_Dobber- Owner

- Tier 1 Country
- Document Scans: Completed
- Video Analysis: Completed
- Risk Score: 0 (PASS) (40)

The team is only made up of one person and that is the owner himself. He has contracted out work when he has needed help to those in the community that he trusts. Mudd ensures he remains extremely active inside his community and often engages with other communities to build trust before deciding where to fire his cannon next.

It is our opinion that all of this information together solidifies The Hive Mind's place as a truly trustworthy project in the cryptocurrency industry.

General Observations

The Hive Mind is a collective conscious of like-minded individuals who prefer to move as one unit. It is this mindset that the idea of the Low Orbit Ion Cannon was born. The Low Orbit Ion Cannon is a system in which the users can pool their ETH into 1 deployer and collectively make a purchase as one unit. This allows everyone to be able to buy into a prospective project for the same price, allowing for fair distribution, and immense gas savings. They have already deployed the cannon 7 times on 6 projects, proving the system to work.

Decentralized Hamster: The project is going to select projects for the Low Orbit Ion Cannon using their new mascot, a hamster. The way this is achieved is that the Hamster, or affectionately known as “Hammy”, will be placed into a intricate maze with potential projects as “Destinations” for him to escape to. These events will be live streamed so as not have any sort of manipulation into what projects he chooses. This also presents itself as an excellent marketing tactic and a potential revenue source for the Hive. These events can sell ad space, as well as projects can place bids to be on the maze board before the show starts. Potential projects will first be ran through a vetting process so as to not allow any sort of scams or malicious communities to participate. Potential for betting on the show and where the hamster goes is also in the works, so that the community can actively engage with the project even further. The added meme possibilities for the hamster and the different costumes it can wear are also endless and can contribute greatly to the marketing.

Total Points Summary

SCORE: 93/100

Financials: 17/20 | Contract 36/40 | KYC 40/40

FINANCIALS: 17/20

A thorough deep dive of the financials has been conducted of The Hive Mind project checking into connected wallets as well as into the taxes themselves and their utilization. There were no irregularities found during this deep dive and the owner was forthcoming in the few questions we had, which matched what we expected to hear. So far as funds are concerned, the Hive Mind is a very special case when it comes to cryptocurrencies as most projects would undergo greater price fluctuations and higher volume, but that is not the case here. Instead those who join enter a community where they stay and hold, creating a token that often reaches one all time high after another. This is important as unfortunately it does not generate as much in taxes as would normally with other projects in this same market cap range. Less taxes means less is available for use in the tax wallets as well.

CONTRACT: 36/40

Much of the reason for migrating was to ensure a safer contract and to clear up any issues that remained with the prior one. The goal was to obtain a perfect score with the automatic scanners so those new to the project would know this was a trustworthy community they were entering into. Unfortunately, when it comes to automatic scanners the score may still be reduced as it can still be confused as it looks for taxes that can be changed even though they are defined as constants, or the liquidity that was accidentally vested instead of locked, plus how this was purposefully meant to be left as an unrenounced contract. Even though steps were put into places in order to make improvements in this contract, there may be more communication needed with new investors to explain these steps as the scanners will not do it for them. While we ourselves may not take away a large deal of points for being unrenounced due to the way this contract was designed with safety in mind, scanners will not take reasoning into account.

KYC: 40/40

The owner of the project, @Mudd_Dobber, has undergone our rigorous KYC process. This process includes verification of a government issued ID, as well as a video call. Info gathered from the call is then cross referenced for matching data and details to ensure the validity of the claims from the applicant. Not only did the owner present true and verified information, but data about himself was also verified, corroborating his story. Mudd has also sent photos of himself to many people in his project's telegram group, as well as to members of our very own team. Many members of the chat group also have met him in person and have developed a relationship with him outside of crypto. Thus our team feels certain in giving Mudd a perfect KYC score.

TOTAL VALUE	PARTICIPANTS	TOKEN AMOUNT	REMAINING ETH
0.191708 ETH	2	\$0.00	0 ETH

Conclusion

The Hive mind is not only a technically safe project as shown through this report, but a well thought out one that looks out for the best interests of its community. Through the use of the Low Orbit Ion Cannon, a hamster for marketing, and developing a strong community in itself, The Hive Mind is a truly unique project that looks to be a standout for the future. The owner is exceptionally active in the chat and receptive of new ideas for marketing and utility, as well as properly integrating himself into his community and that of partners alike. The community itself is also involved as a means of marketing, as they are the ones responsible for running the X account for the Hive Mind and do so purely because of their love for what they are creating together. The community has also rallied together for the relaunch and self funded a marketing wallet to ensure proper exposure when the time came. Innovia Trust finds The Hive Mind to be a phenomenal project for both what it has accomplished during this migration as well as for what it represents as a community.
