Activation

Prerequisite

You should be a **Certification Body** (CB) that is accredited by an IAF MLA signatory member Accreditation Body under the main scope ISO/IEC 17021-1.

The activation link to activate your IAF CertSearch CB account should be provided by your AB. Should you wish to create a CB account, please contact either

Activating your CB Account

To activate your CB account:

1. Contact your AB to get your activation link
2. Once received, access the activation link from your browser
 - a. The activation link expires in **4 months** upon generation
 - b. if the link already expired, request a new link to your respective ABs.
3. Read the Terms and Conditions, Privacy Policy, and Data Management Provisions, then check the tick boxes.
4. Once agreed, fill up the necessary information

Activation Form

- Company Name
- Country
- Company Industry (optional)
- Email Address
- First Name
- Last Name
- Password

5. Once done, click the **Create an Account** button
6. You should receive a code via email, the **code will be sent to the email**

address you used for activation.

7. Input a **6-digit code**, then click Submit

Already have an account? [Log In](#)

Pumili ng Wika Pinapagana ng Google Isalin

✓ Terms and Conditions — ✓ Account Details — **3 Verification** — 4 Sign Agreement

Verify your Email

We sent a 6-digit code to your email. Enter the code from email in the field below to verify your account.

[Submit](#)

Didn't receive the code? [Resend code](#)

8. Once done, submit the signature of the representative or your organization

9. Once completed, click the Submit button

10. You'll be redirected to a Success page, click 'Get Started' to proceed to your account dashboard.

What's Next?

Once you are done setting up your account you can proceed with managing your data. See the following:

- Manage Profile
- Add Accounts
- Import Certificates
- Manage Security Settings

Data Management

Certified Entities

The Certified Entities provide access to the Certified Entities uploaded by the CB. The certification data is collected and imported by the CB through [Manual Data Entry](#), [File Upload](#), [FTP](#) or [API](#).

This page provides the ability to view and manually manage the Certified Entity data.

Certified Entities

To view the Certified Entities list, click 'Certified Entities' from the left-hand navigation.

This page includes the following information:

Column Name	Description
Certified Entity Unique ID	<i>A unique identifier for a specific Certified Entity. Used as a reference or a tracking number to look up Certified Entity records in the IAF CertSearch database.</i>
Certified Entity	<i>Name of the Certified Entity</i>
Country	<i>Country where the Certified Entity is located</i>
Confidential Certified Entity	<i>Permission to access the Certificate Information in public, where value can either be:</i> <ul style="list-style-type: none">● <i>Confidential, limits the certification details to the public</i>● <i>Non-Confidential, allows public access to the certification details</i>
Certifications	<i>Number of certificates issued to the Certified Entity</i>
Updated at	<i>Date the certified entity data was last updated</i>
Created at	<i>Date the certified entity record was created</i>

You can also refine the list by Searching by **Certified Entity Name** and **Filtering by Country**.

This section also provides the ability to view and manage individual Certified Entity information.

View and Manage Individual Certified Entity

Note: Adding Certified Entity data requires Certificate Information.

- Certified Entity Detail Page
- Updated Certified Entity
- Add Certificate to a Certified Entity
- Add Certified Entity

Managing Certified Entity data through Data Import

Before importing data through Data Import, ensure to learn about the IAF CertSearch Data Format and Structure, such as [Certificate File Format](#), [Certificate Template](#), [Manage Data in Excel](#), and [Manage Data in XML](#).

Data Import Methods

- File Upload
- FTP
- API

Certified Entity Detail Page

View the Certified Entity detail page

1. In the Certified Entities listing page, search for the Certified Entity name you want to view
2. To view the Certified Entity detail page you can either click on the:
 - **Certified Entity name**
 - **'Actions'** button
 - then, click **'View Details'**
3. Once done, you'll be redirected to the Certified Entity page, where you'll have access to the Certified Entity **Details** and its **Certificates**.

Certified Entity Details

This section provides the ability to view and manage the Certified Entity details such as:

Certified Entity Information

Company Information

- Company Name (**required**)
- Company Trading Name (optional)
- Company English Name (optional)
- TAX ID (optional)
- Company ID Number (optional)
- Business Registration Number (optional)
- Confidential Certified Entity (optional)

Location Information

- Certified Entity Country (optional)
- Certified Entity Street (**required**)
- Certified Entity City (**required**)
- Certified Entity State (optional)

- Certified Entity Zipcode/Postcode (required)

System Information

Data added to the system information serves as the identifiers of the certified entity record which can be used as a reference for updating data during data import.

- Company Name (required)
- Certified Entity Unique ID (required)

Recommendations:

We recommend keeping or maintaining 1 Certified Unique ID assigned to 1

Manage the Certified Entity Details

- Edit Certified Entity
- Add Certificate

Certificates

This section provides the ability to view and manage the certificates issued to the Certified Entity, which includes:

- Certificate Status
- Certificate Number
- Standard
- Confidential
- Expiry Date
- Accreditation Body
- Certified Entity
- Site Location
- Updated at

Add Certified Entity

To manually add a Certified Entity

1. On the Certified Entities listing page, click the Add Certified Entity button

Certified Entities | 9

The Certified Entities provides the ability to view all of the Certified Entities which have been uploaded. Within the Certified Entities list you can refine the list Filtering by Status, Filtering by Location, Searching by Certified Entity Name. [More Detail](#)

Inactive	CEID-13	XYZ Inc	United Kingdom	No	1	2023-08-15	2023-08-15	Actions

2. You'll need to fill in your data into the **Certified Entity form**, which has 2 data forms: Certified Entity Information and Certificate Information.

Certified Entity Information

Company Information

- Company Name **(required)**
- Company Trading Name (optional)
- Company English Name (optional)
- TAX ID (optional)
- Company ID Number (optional)
- Business Registration Number (optional)
- Confidential Certified Entity (optional)

Location Information

- Certified Entity Country (optional)
- Certified Entity Street **(required)**

- Certified Entity City (required)
- Certified Entity State (optional)
- Certified Entity Zipcode/Postcode (required)

System Information

Data added to the system information serves as the identifiers of the certified entity record which can be used as a reference for updating data during data import.

- Company Name (required)
- Certified Entity Unique ID (required)

Certificate Information

Certificate Information

- Certification Status (required)
- Certificate Number (required)
- Certification Type (required)
- Certification Standards and Schemes (required) (required)
- Certification Scope (optional)

Public Information

- Accreditation Body (required)
- Certificate Number (required)
- Certification Type (optional)
- Certification Standard and Scheme (required)
- Certification Scope (optional)

Certificate Issuance Details

- Certificate Original Issue Date (optional)
- Certificate Issued Date (required)
- Certificate Expiry Date (required)

Certification Additional Sites (optional data)

- Certified Entity Country (optional)
- Certified Entity Street (optional)
- Certified Entity City (optional)
- Certified Entity State (optional)
- Certified Entity Zipcode/Postcode (optional)

3. Once completed, click the 'Submit' button
4. If all data is valid, the Certified Entity and its certificate information will be successfully added.

Add Certificate

To manually add a certificate to an existing Certified Entity

1. On the Certified Entities listing page, click the Certified Entity to which you want to add the certificate.
2. On the **Certified Entity detail page**, click the **Certifications** tab
3. Click the **Add Certificate** button

Managing Certified Entity data through Data Import

Before importing data through Data Import, ensure to learn about the IAF CertSearch Data Format and Structure, such as [Certificate File Format](#), [Certificate Template](#), [Manage Data in Excel](#), and [Manage Data in XML](#).

Data Import Methods

- File Upload
- FTP
- API

Add Certificate

To manually add a certificate you'll have 2 options:

1. Add to an existing Certified Entity record
2. Add a Certificate to a new Certified Entity

To manually add a Certificate with a new Certified Entity:

1. Go to the Certified Entity page
2. Click the 'Add Certification' button

Certified Entities | 1

The Certified Entities provides the ability to view and manage the Certified Entities information uploaded by your organization. To know more go to the [Certified Entities Help Guide](#)

[Bulk Import](#) [+ Add Certified Entity](#)

Unique ID	Certified Entity	Country	Confidential	Certifications	Updated at	Created at	
123	Sample Company	United States	No	1	-	2024-03-14	View Details Add Certification

3. You'll need to fill in your data into the **Certificate Information form**, which has 2 data forms: Certified Entity Information and Certificate Information.

Certification Information

Certificate Information

- Certification Status **(required)**
- Accreditation Body **(required)**
- Certificate Number **(required)**
- Certification Type **(read-only)**
- Certification Standards and Schemes **(required)**
- Certification Scope (optional)

Certificate Issuance Details

- Certification Original Issue Date (optional)
- Certificate Issued Date **(required)**
- Certificate Expiry Date **(required)**

Certification Additional Sites (optional data)

- Certified Entity Country (optional)

- Certified Entity Street (optional)
- Certified Entity City (optional)
- Certified Entity State (optional)
- Certified Entity Zipcode/Postcode (optional)

4. Once completed, click the 'Submit' button
5. If all data is valid, the Certified Entity and its certificate will be successfully added to the IAF CertSearch.

Note: If errors are encountered during the import process, go to Error Handling to

Add Multiple Standards

To manually add multiple standards:

1. On the Certificate detail page, click the 'Edit' button
2. In the standard field section, click the 'Add Standard' button

The screenshot shows a web form titled "Certificate Information" with a "Cancel" button in the top right corner. The form is divided into several sections:

- Status:** A dropdown menu for "Certification Status" is set to "Active".
- Public Information:** A note states "The certification information will appear on the profile page." Below this are several fields:
 - Accreditation Body ***: "United Kingdom Accreditation Service" (with a clear 'X' button).
 - Certified Entity**: "ABC Corporation" (in blue text).
 - Certificate Number ***: "CERT-016".
 - Certification Type**: "Management System".
 - Certification Standard and Scheme ***: "ISO 50001:2018 : Environment Management System" (with a clear 'X' button). Below this input is a blue button with a plus sign and the text "+ Add Standard & Scheme", which is circled in red.
 - Certification Scope**: A text area containing "Certification Scope".
 - Site**: "Sandhurst, Berkshire, United Kingdom".

Adding a Standard in an existing certificate record.

3. In the added input box, select or search for the standard you want to add
4. Once selected, click the '**Submit**' button
5. If all data is valid, the standard will be successfully added to the certificate.

Add Additional Site

To add additional site:

1. In the Certifications listing page, search for the certificate you want the additional sites to be added
2. Click the **Certificate Number** or the **'View'** button

Note: If errors are encountered during the import process, go to Error Handling to

Edit Certificate

To manually update certificate information

1. In the **Certifications** listing page, search for the certificate you want to update
2. Click the **Certificate Number**
3. On the Certificate detail page, click the **Edit** button

4. Enter the updated data into its corresponding input fields:

Certificate Information

Certificate Information

1. Certification Status **(required)**
2. Accreditation Body **(required)**
3. Certified Entity **(Hyperlink of CE)**
4. Certificate Number **(required)**
5. Certification Type **(read-only)**
6. Certification Standards and Schemes **(required)**
7. Certification Scope (optional)

8. Certification Main Site (read-only)

Certificate Issuance Details

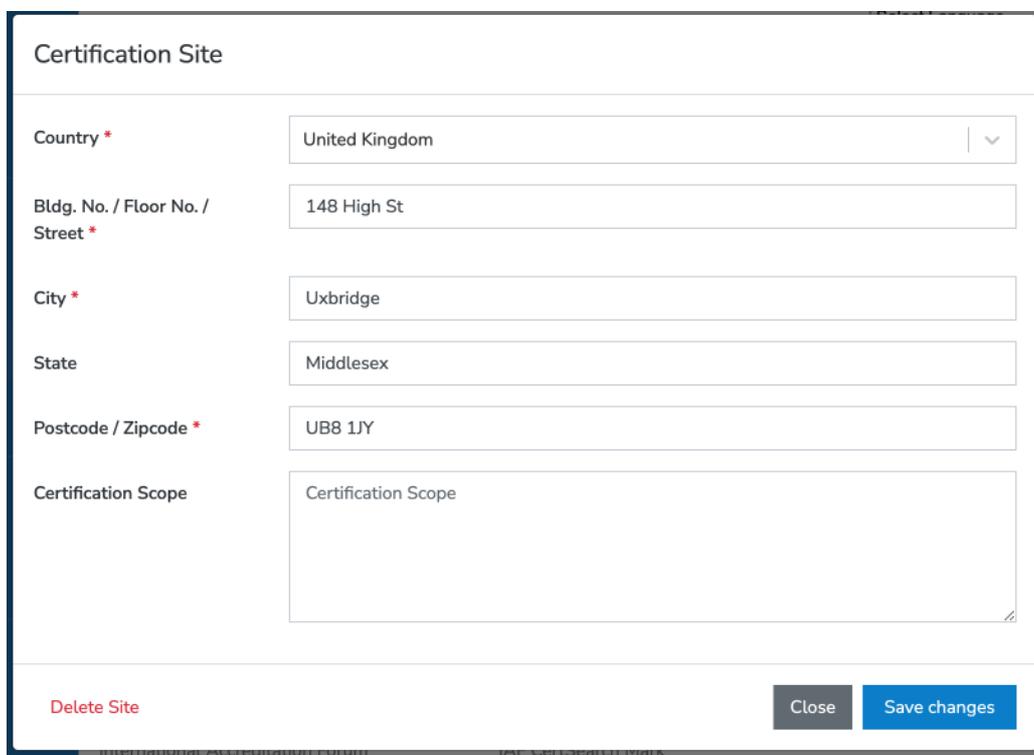

1. Certificate Original Issue Date (optional)
2. Certificate Issued Date (required)
3. Certificate Expiry Date (required)

4. Once Updated, click the '**Submit**' button
5. If all data is valid, the additional site data will be successfully updated.

Edit Additional Sites

To manually update additional sites

1. In the **Certifications** listing page, search for the certificate you want to update
2. Click the **Certificate Number**
3. On the Certificate detail page, click the '**Additional Sites**' tab
4. Search for the site you want to update
5. Then under the actions column click the '**Edit**' button

The screenshot shows a form titled "Certification Site" with the following fields and values:

- Country *: United Kingdom
- Bldg. No. / Floor No. / Street *: 148 High St
- City *: Uxbridge
- State: Middlesex
- Postcode / Zipcode *: UB8 1JY
- Certification Scope: Certification Scope

At the bottom of the form, there are three buttons: "Delete Site" (in red), "Close", and "Save changes" (in blue).

Update Certification Site

6. Update the data fields you want to update
7. Click the '**Save Changes**' button
8. If all data is valid, the additional site data will be successfully updated.

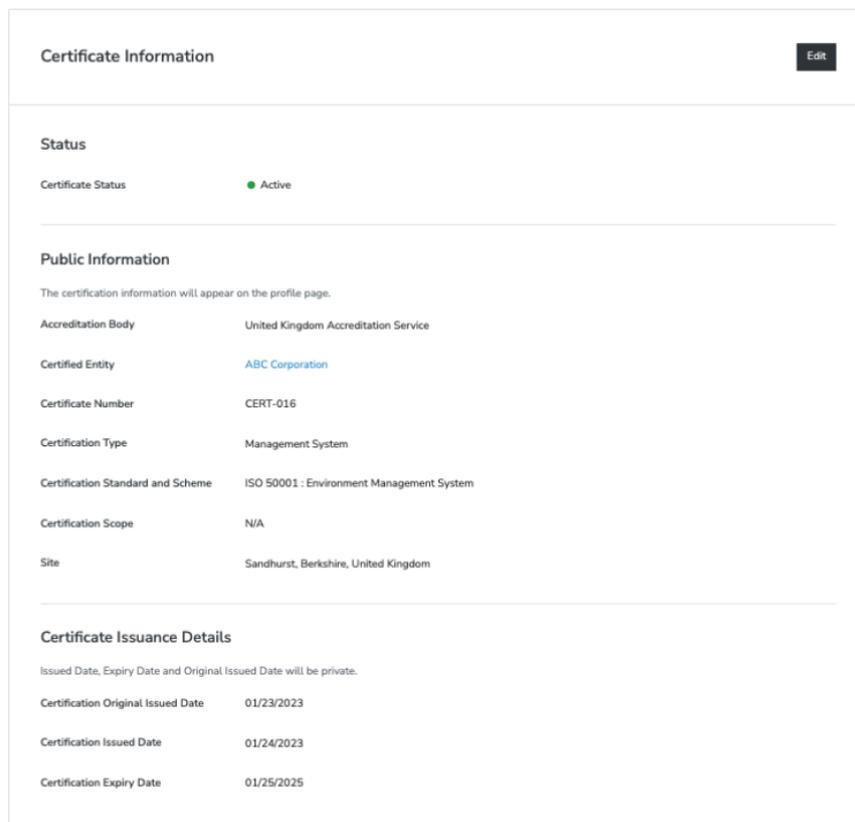

Delete Certificate

Here are articles that guide you through manually deleting certificate data from the IAF CertSearch database.

IMPORTANT NOTE: Please be aware that once you have deleted your certifications they are **permanently deleted from the database, it is not possible to reverse this action.** The IAF Database LLC takes no responsibility for any ramifications which may be caused by taking this action, see terms and conditions for further detail.

Delete an individual certificate

1. In the **Certifications** listing page, choose the certificate you want to delete
2. Scroll to the bottom section of the certification detail page

The screenshot shows a 'Certificate Information' page with an 'Edit' button in the top right corner. The page is divided into three main sections: 'Status', 'Public Information', and 'Certificate Issuance Details'. The 'Status' section shows 'Certificate Status' as 'Active' with a green dot. The 'Public Information' section includes fields for Accreditation Body (United Kingdom Accreditation Service), Certified Entity (ABC Corporation), Certificate Number (CERT-016), Certification Type (Management System), Certification Standard and Scheme (ISO 50001 : Environment Management System), Certification Scope (N/A), and Site (Sandhurst, Berkshire, United Kingdom). The 'Certificate Issuance Details' section includes fields for Certification Original Issued Date (01/23/2023), Certification Issued Date (01/24/2023), and Certification Expiry Date (01/25/2025). A red circle highlights a 'Delete Certification' button at the bottom of the page.

3. Click the '**Delete Certificate**' button
4. To ensure that you are not accidentally deleting the certification data, a delete confirmation is needed.

Delete Certification

This action will permanently delete certification. To delete certification in your IAF CertSearch account, you must be the Super Administrator account holder (Super Admin) and have authority from your organization to take this action.

Please be aware that once you have deleted your certifications they are permanently deleted from the database, **it is not possible to reverse this action**. The IAF Database LLC takes no responsibility for any ramifications which may be caused by taking this action, see terms and conditions for further detail.

Delete Certificate Confirmation

1. Click the **'Send OTP'** button
2. Copy the code from your inbox and paste it into the Verify OTP input fields
3. Once completed, click the **'Delete Certification'** button.

Delete Additional Site

To delete an additional site from a certificate:

1. In the Certifications listing page, search for the certificate you want the additional sites to be added
2. Click the **Certificate Number**
3. On the Certificate detail page, click the '**Additional Site**' tab
4. Search for the site you want to delete.
 - a. In the actions column, click the **More** icon
 - b. Click the '**Delete**' button

Standards and Schemes

The Standards provide access to the CB's accredited standards, technical sectors, country/economy, and office directories. The Accreditation Bodies import and manage the data on this page.

Please note: Should you wish to update or change any of the data, please get in touch with your respective Accreditation Body

Standards and Schemes

Technical Sectors

Country / Economy

Key Locations

Standards and Schemes

The standards and schemes tab provides access to all the accredited standards assigned to the CB.

Column Name	Description	Example
Standard Status	Current standing of the CBs standard status.	<i>Active, Suspended, Withdrawn</i>
Standard	Specific set of criteria, requirements, or guidelines that the CB has been assessed against and found to be in compliance with	<i>ISO 9001:2015</i>
Scheme	Specific description of the products, services, processes, or activities for which the CB has been granted accreditation.	<i>Quality Management System</i>
Scheme Type (Program)	Refers to the main scope or program of the certificate	<i>Management System</i>
IAF MLA		check or "x"
Accreditation Body	Name of the Accreditation Body	<i>United Kingdom Accreditation Service (UKAS)</i>
Certification	Number of certifications issued with the accredited standard	<i>100</i>
Country/Economy	The countries or economies assigned to the standard	Canada, Australia

Technical Sectors

The technical sectors tab provides access to all the technical sectors assigned to the CB.

The Technical Sector library is being updated and the sector mapping feature is being implemented to conform with the IAF MD and to support consistency and analytics. Some of your technical sectors may not be accessible whilst this update is being implemented. Any questions please contact info@iafcertsearch.org

Column Name	Description	Example
Sector Name	Segment of the economy where different businesses engage in the same or similar activity or provide the same or similar products or services.	Agriculture, forestry and fishing
Sector Code	Code assigned to the sector	<i>IAF01</i>
Standards and Schemes	Refers to the number of standards and schemes affiliated with the technical sector	<i>1</i>

Country / Economy

The country/economy tab provides access to all the countries or economies where the CB accreditations are eligible.

Column Name	Description	Example
Country/Economy	Country/Economy in which the CB is eligible to issue accredited certificates.	United Kingdom
Standards and Schemes	Shows the number of standards and schemes affiliated with the country/economy	1

Key locations

The office directory tab provides access to all the office addresses and office types of the CB.

Column Name	Description	Example
Office Type	Office type of the added location.	<ul style="list-style-type: none"> ● Corporate Head Office(Main accredited entity office) ● Regional Head Office ● Country Head Office ● Branch Office
Country/Economy	Country/Economy in which the CB offices are located.	United Kingdom
Address	Office address	Unit 11, Stocklake Industrial Area, Pembroke Road
Accreditation Body	Name of the Accreditation Body	<i>United Kingdom Accreditation Service (UKAS)</i>
Standards and Schemes	Number of Standards and Schemes affiliated with the Country/Economy	1
Updated at	Date last updated	20221223
Created at	Date created	20220123

Data Import

Getting Started

Data Import Certificates provide the ability to import your data into IAF CertSearch through different import methods. The data can come from a variety of sources, including **spreadsheets (.xlsx)**, **text files (XML)** or **APIs**. It is recommended for members who want to upload bulk data from at least 20 up to 100,000 or more.

This documentation will help you get started with uploading and managing your data through different Data Import Methods.

Before proceeding to import, we recommend ensuring the following prerequisites have been met:

Prerequisites

An active IAF CertSearch CB account

A formatted file, containing the data you want to upload

Certification Templates

To successfully import Certification data into IAF CertSearch, you need to know about the following:

Learn about the CB data structure

- [Certification Fields Glossary](#)

Downloadable Templates

To successfully import your certification data into the IAF CertSearch database, it is required that the data be formatted in the provided templates.

Additional Note: When you click the Download Template button, different versions of the templates should be available for download.

Once downloaded, you may start adding your data to the spreadsheet.

To download the Certification **XML** Data Templates:

1. Under Data Management, go to the Import Certification page
2. In Download Data Templates, click the '**XML Template**' button

Data Import

Data import allows users to bring data from an external source into IAF CertSearch. This can be done by retrieving data from a file or an API. For more information, [click here](#).

[Data Import](#) [FTP Settings](#) [API Integration](#) [Global Mapping](#) [Import Activities](#) [Import Settings](#)

Select how you want to import your data

[Download Excel Template](#)  [Download XML Template](#) 

Attention: Uploading via .xls format will no longer be supported. If you want continue uploading, please download the .xlsx format

File Upload

Imports data using the IAF CertSearch Web Uploader

FTP Server

Imports data from your FTP server

API

Imports data using API

Additional Note: When you click the Download Template button, different versions of the templates should be available for download.

Once downloaded, you may start adding your data to the XML file.

Excel General Rules

General Rules

File Format	File format should be .xlsx only
Column Header Names	Keep the column names the same as the template. If changed, the system requires field mapping to recognise the data.
Column Sequence	Keep the order of the columns the same as in the template. If changed, the data processing may be disrupted and cause data errors.
Sheet Tab Sequence	Keep the order of the sheet tabs the same as in the template. If changed, the data processing may be disrupted and cause data errors.
Record limit	The maximum record limit for the certification sheet of the Excel file is 10,000. If the certification sheet in your Excel file has more than 10,000 records, then you need to upload multiple files that are only limited to up to 10,000 records per file.
File size	The maximum file size for Excel files is 50MB. If your Excel file is greater than 50MB then you need to upload multiple files that are all less than 50MB.
File name(s)	IAF CertSearch recommends you name your files as per below: Single: <code>cb_certs.xlsx</code> Multiple files: <code>cb_certs_1.xlsx</code> , <code>cb_certs_2.xlsx</code> , <code>cb_certs_3.xlsx</code>

DOs

- **Keep data format consistent**
- **Format data into the provided IAF CertSearch template**
- **Enter single data value entry per cell**

DON'Ts

- **Do not upload other formats** supported in Excel, such as .xls, .xlsm, .xlsb, .xlr
- **Do not delete any columns** from the template. If deleted, the system will throw a missing field error.
- **Do not skip field mapping.** If skipped, data is not processed and imported.
- **Do not merge columns.** If merged, the system throws a data field error.
- **Do not leave the required fields empty**
- **Do not format data values as formulas.**

Tips

- To minimize import interruptions, it is recommended not to update/delete/change any of the field names and structure.
- Remove any unnecessary or redundant columns that won't be used in the analysis.
- Check for missing or incomplete data and decide how to handle it (e.g., filling in missing values, removing rows, etc.).
- Validate data entries to ensure they meet required standards (e.g., valid dates, numeric values, etc.).
- **Remove Duplicates.** Eliminate duplicate rows or entries to prevent redundancy and inaccuracies in analysis.
- Make sure data types for each column match the requirements of IAF CertSearch. For example, data values should be in the text format.
- Thoroughly understanding the IAF CertSearch requirements and the characteristics of your data will help ensure a successful data import process.

Manage Data in Excel

Import Certification Data from Excel file

NOTE: Adding certification via Excel is recommended for bulk data import. If you want to update a single record or records not more than 10 certificates we recommend you use the [Manual Data Entry](#).

Prerequisites:

- Clean and format data according to the IAF CertSearch data structure. [Learn more](#).

(1) To add certification data to an existing Certified Entity via Excel

1. In the Certificate Excel spreadsheet, please enter the data into their corresponding fields.

Certified Entity Information

1. Certified Entity Name **(required)**
2. Certified Trading Name (optional)
3. Certified English Name (optional)
4. Certified Entity Street **(required)**
5. Certified Entity City **(required)**
6. Certified Entity State (optional)
7. Certified Entity Country **(required)**
8. Certified Entity Zipcode/Postcode **(required)**

Certificate Information - certificate issued to the Certified Entity

1. Certificate Number **(required)**
2. Certification Status **(required)**
3. Certification Type **(required)**
4. Certification Standards and Schemes **(required)**
5. Certification Scope (optional)
6. Certification Original Issue Date (optional)
7. Certification Issue Date **(required)**
8. Certification Expiry Date **(required)**

i Tips: Ensure that the Certified Entity Unique ID and the Certified Entity name match with the existing Certified Entity record.

1. Once completed, go to the IAF CertSearch Data Import page
2. Choose how you would like to import your data
 - a. **File Upload** - [Learn how to import data through File Upload](#)
 - b. **FTP** [Learn how to import data through FTP](#)
3. Once selected, click the **Continue** button (the system will initiate file and data processing)
4. If all the files and data are valid, the certificate will be successfully added to the existing Certified Entity record.

Note: If errors are encountered during the import process, go to Error Handling to

(2) To add certification data to a new Certified Entity record

1. In the Certificate Excel spreadsheet, please enter the data into their corresponding fields.

Certification

Tips: Ensure that the CIN matches the certificate record references across all t

- Certification Identity Number **(required)**
- Certificate Number **(required)**
- Certification Status **(required)**
- Certification Type **(required)**
- Certified Entity Name **(required)**
- Certified Trading Name (optional)
- Certified English Name (optional)
- Certified Entity Street (required)
- Certified Entity City **(required)**
- Certified Entity State (optional)
- Certified Entity Country **(required)**
- Certified Entity Zipcode/Postcode **(required)**
- Certification Scope (optional)

- Certification Original Issue Date (optional)
- Certification Issue Date (required)
- Certification Expiry Date (required)

Certification Standard & Scheme

Tips: Ensure that the CIN matches the existing certificate record added within sheet tab.

- Certification Identity Number (required)
- Standard Name (required)
- Scheme Name (required)

Certification Additional Sites

Tips: Ensure that the CIN matches the existing certificate record added within sheet tab.

- Certification Identity Number (required)
- Additional Site Address (optional)
- Additional Site City (optional)
- Additional Site State (optional)
- Additional Site Zipcode/Postcode (optional)
- Additional Site Country/Economy (required)
- Additional Site Scope (optional)

1. Once completed, go to the IAF CertSearch Data Import page
2. Choose how you would like to import your data
 - a. **File Upload** - [Learn how to import data through File Upload](#)
 - b. **FTP** - [Learn how to import data through FTP](#)
3. Once selected, click the '**Continue**' button (*which initiates data validation*)
4. If all the files and data are valid, the Certified Entity and Certification records will be successfully added.
 - To view the added certifications go to the **Certification** listing page
 - To view the added certifications go to the **Certified Entity** listing page

TIPS: We recommend updating the same file you used to upload your data, that way you minimize import interruptions or errors.

To update certification data via Excel

In the Certificate Excel spreadsheet, look for the data that you want to update.

Tips: Ensure that the Certified Entity Unique ID and the Certified Entity name match with the existing Certified Entity record.

Tips: Ensure that the Certified Entity Unique ID and the Certified Entity name match with the existing Certified Entity record.

Certified Entity Information

- Certified Entity Name (required)
- Certified Trading Name (optional)
- Certified English Name (optional)
- Certified Entity Street (required)
- Certified Entity City (required)
- Certified Entity State (optional)
- Certified Entity Country (required)

Certified Entity Zipcode/Postcode (required)

Certificate Information - certificate issued to the Certified Entity

- Certificate Number (required)
- Certification Status (required)
- Certification Type (required)
- Certification Standards and Schemes (required)
- Certification Scope (optional)
- Certification Original Issue Date (optional)
- Certification Issue Date (required)
- Certification Expiry Date (required)

1. To learn more about Certification fields, click [here](#)
2. Once completed, go to the IAF CertSearch Data Import page

3. Choose how you would like to import your data
 - a. **File Upload** - [Learn how to import data through File Upload](#)
 - b. **FTP** - [Learn how to import data through FTP](#)
4. Once selected, click the **Continue** button (*which initiates the data validation process*)
5. If all the fields and data are valid, the certificate will be successfully added to the existing Certified Entity record.

Note: If errors are encountered during the import process, go to Error Handling to

XML General Rules

General Rules

Here are the general rules to successfully upload certification data through an XML file:

File Format	The file format must be <code>.xml</code>
File Size	The maximum file size for XML files is 50MB. If your XML file is greater than 50MB then you need to split it up and upload multiple files that are each less than 50MB.
Filename	IAF CertSearch recommends that you name your files using the following formats: Single: <code>cb_certs.xml</code> Multiple files: <code>cb_certs_1.xml</code> , <code>cb_certs_2.xml</code> , <code>cb_certs_3.xml</code>
XML Tag	XML tags must be the same as in the template. If changed IAF CertSearch will not recognise the field data and will not be uploaded.
XML Tag sequence	Tags should be in order and must be the same as in the template. If changed IAF CertSearch will not recognise the tabs and the data in those tabs will not be uploaded.

Understanding XML file format

Important Notes

- 1. XML documents must contain one root element that is the parent of all other elements:**

For cert upload, the root element is `<client_certs></client_certs>`

- 2. This line is called the XML prolog: `<?xml version="1.0" encoding="UTF-8?">`**

The XML prolog is optional. If it exists, it must come first in the document. XML documents can contain international characters, like

Norwegian øæå or French êèé. To avoid errors, you should specify the encoding used, or save your XML files as UTF-8. UTF-8 is the default character encoding for XML documents.

3. All XML Elements Must Have a Closing Tag

XML tags are case-sensitive. The tag is different from the tag. The opening and closing tags must be written in the same case:

any tags there are left unclosed will result in an error: **Invalid XML file uploaded**

Wrong: <certification_body_identity_number>%VALUE GOES HERE

Correct: <certification_body_identity_number>%VALUE GOES
HERE</certification_body_identity_number>

4. XML Elements Must be Properly Nested

In XML, all elements must be properly nested within each other:

Wrong:

<certification_identity_number><certification>CERT-0001</certification_identity_number>
</certification>

Correct:

<certification> <certification_identity_number>CERT-
0001</certification_identity_number></certification>

5. Tags cannot contain blank space

eg. <certification identity number>

The system will not recognize this syntax and will throw an error: **Invalid XML file uploaded**

6. **All parent tags should be included when uploading an XML file**, if the parent tags are missing, the system will throw an error: **Invalid XML file uploaded**
7. **If the certification_standard_and_scheme and its children are empty**, the system will throw an error: **Invalid XML file uploaded**
8. **Invalid tags for optional fields will not trigger an error**, but the data added within the tag won't be displayed in the system

Correct: `<original_issue_date>01/20/2021</original_issue_date>`

Wrong (from file): `<orig_issued_date>01/20/2021</orig_issued_date>`

9. Data displayed in the system

Original Issued Date: *(empty)*

DOs and DONTs when formatting data in an XML

Things to keep in mind when populating your data into an XML file.

DOs

1. **Single data value entry per tag**
Ensure only single data values are entered into one tag. When uploading multiple data values don't include more than one data value in one tag.
2. **Keep data format consistent**
A mismatch in spaces, capitalization, and other types of formatting will cause an error and data will not be matched
3. **Keep the syntax similar to what is provided in the template**

DONTs

4. **Do not leave the mandated fields blank or empty**
5. **Do not add multiple data to a 1 tag**

6. Do not merge multiple data to a 1 tag

Manage Data in XML

We have added useful guides to help you manage your data in an XML file.

Import Certification Data from XML file

NOTE: Adding certification via XML is recommended for bulk data import. If you want to update a single record or records not more than 10 certificates we recommend you use the [Manual Data Entry](#).

Prerequisites:

- Clean and format data according to the IAF CertSearch data structure. [Learn more.](#)

(1) To add certification data to an existing Certified Entity via XML

1. In your text editor, please enter the data into their corresponding tags.

XML Fields

Certification Templates

```
<?xml version="1.0" encoding="UTF-8"?>
<cb_certs>

    <standard_name></standard_name>
  </standard_and_scheme>
</certification_standard_and_scheme>
</certification>
</cb_certs>

```

2. Once completed, go to the IAF CertSearch Data Import page
3. Choose how you would like to import your data
 - a. **File Upload** - [Learn how to import data through File Upload](#)
 - b. **FTP** [Learn how to import data through FTP](#)
4. Once selected, click the **Continue** button (the system will initiate file and data processing)
5. If all the files and data are valid, the certificate will be successfully added to the existing Certified Entity record.

Note: If errors are encountered during the import process, go to Error Handling to

(2) To add certification data to a new Certified Entity record

1. In your text editor, please enter the data into their corresponding tags.
2. Once completed, go to the IAF CertSearch Data Import page
3. Choose how you would like to import your data

- a. **File Upload** - [Learn how to import data through File Upload](#)
 - b. **FTP** - [Learn how to import data through FTP](#)
4. Once selected, click the '**Continue**' button (*which initiates data validation*)
 5. If all the files and data are valid, the Certified Entity and Certification records will be successfully added.
 - To view the added certifications go to the **Certification** listing page
 - To view the added certifications go to the **Certified Entity** listing page

Updating Certification Data from Excel file

i TIPS: We recommend updating the same file you used to upload your data, that way you minimize import interruptions or errors.

To update certification data via Excel

1. In the Certificate Excel spreadsheet, look for the data that you want to update.

i Tips: Ensure that the Certified Entity Unique ID and the Certified Entity name match with the existing Certified Entity record.

Certified Entity Information

- Certified Entity Name (required)
- Certified Trading Name (optional)
- Certified English Name (optional)
- Certified Entity Street (**required**)
- Certified Entity City (**required**)
- Certified Entity State (optional)
- Certified Entity Country (**required**)
- Certified Entity Zipcode/Postcode (**required**)

Certificate Information - certificate issued to the Certified Entity

- Certificate Number (required)
- Certification Status (required)
- Certification Type (required)
- Certification Standards and Schemes (required)
- Certification Scope (optional)
- Certification Original Issue Date (optional)
- Certification Issue Date (required)
- Certification Expiry Date (required)

1. Once completed, go to the IAF CertSearch Data Import page
2. Choose how you would like to import your data
 - a. **File Upload** - [Learn how to import data through File Upload](#)
 - b. **FTP** - [Learn how to import data through FTP](#)
3. Once selected, click the **Continue** button (*which initiates the data validation process*)
4. If all the fields and data are valid, the certificate will be successfully added to the existing Certified Entity record.

Data Import Methods

This documentation provides an understanding of the different data import methods that you can use for importing your data into IAF CertSearch.

The Data Import feature is where you upload data, it is highly recommended for importing bulk data. It provides access to the manual and automated upload processes.

Data Import Methods

File Upload

FTP

API

File Upload

Getting Started

File Upload is the process of transferring data from an external file via the IAF CertSearch's file uploader.

i Pre-requisites:

- Data formatted in an [Excel](#) or [XML](#) file

Average Transfer Speed: 30 secs ~ 2 mins, may vary depending on the data quality

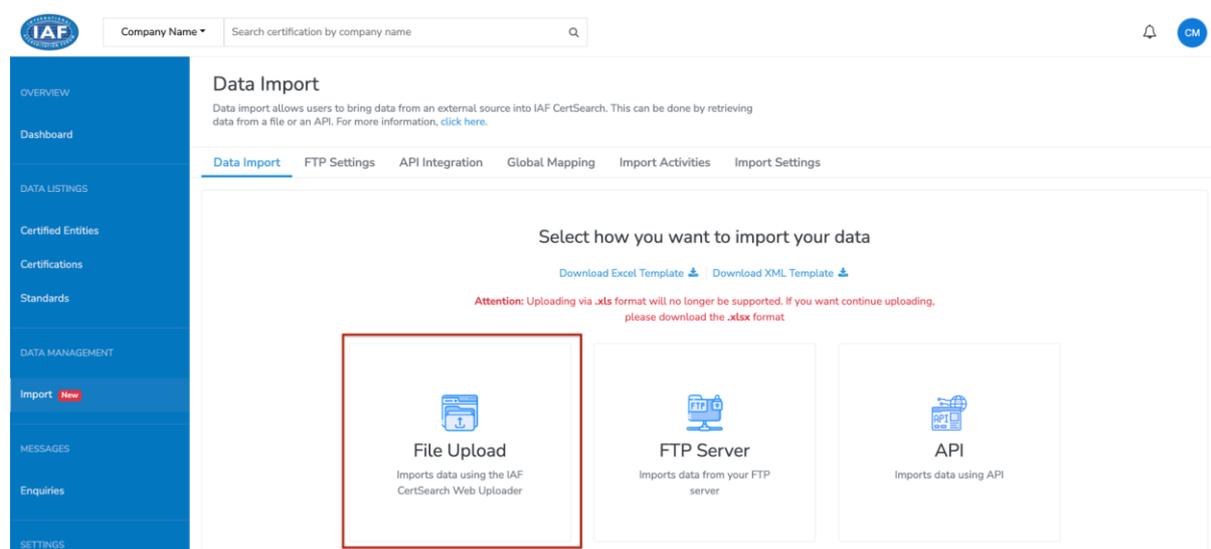

Acceptable Formats: XLS, XLSX and XML

Recommended: Small, Medium and Large CBs that have anywhere between 20 to 100,000 certifications

How to import data via File Upload

To import your data via File Upload:

1. go to the **Data Import** page
2. Choose '**File Upload**' as your data import method

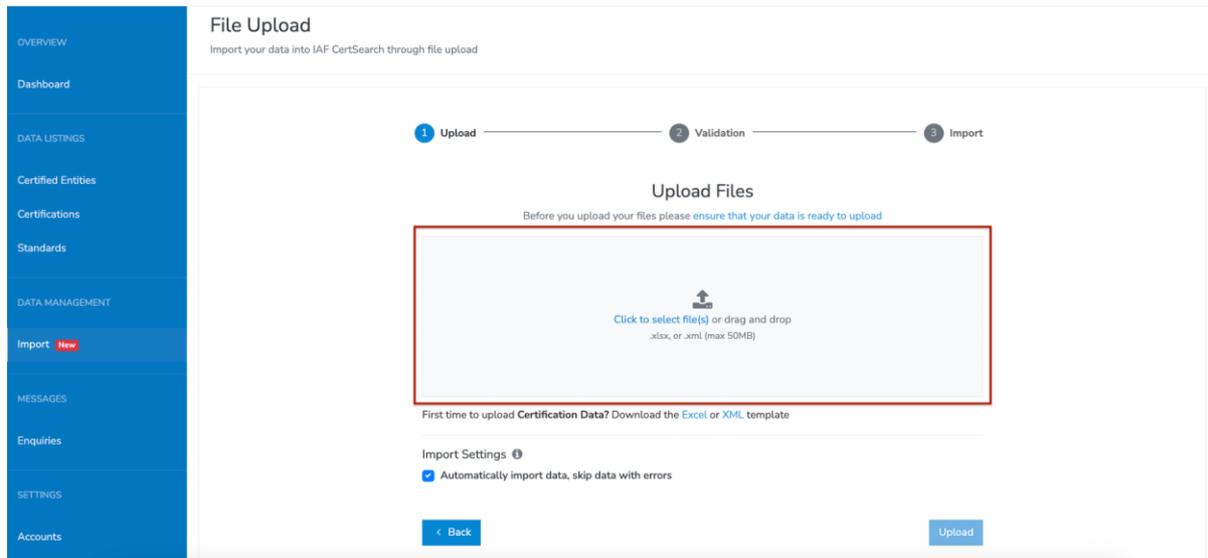

The screenshot shows the IAF CertSearch web interface. At the top, there is a search bar for 'Company Name' and a user profile icon labeled 'CM'. The main content area is titled 'Data Import' and includes a brief description: 'Data Import allows users to bring data from an external source into IAF CertSearch. This can be done by retrieving data from a file or an API. For more information, [click here](#).' Below this, there are navigation tabs for 'Data Import', 'FTP Settings', 'API Integration', 'Global Mapping', 'Import Activities', and 'Import Settings'. The 'Data Import' tab is active. The main content area displays the heading 'Select how you want to import your data' and two links: 'Download Excel Template' and 'Download XML Template'. A red warning message states: 'Attention: Uploading via .xls format will no longer be supported. If you want continue uploading, please download the .xlsx format'. Three import methods are presented as cards: 'File Upload' (Import data using the IAF CertSearch Web Uploader), 'FTP Server' (Imports data from your FTP server), and 'API' (Imports data using API). The 'File Upload' card is highlighted with a red border.

3. Select the files you want to update

NOTE: you can only upload 1 file format in 1 batch, uploading multiple file formats in 1 batch is not permissible. To learn more about the data import rules, click [here](#).

4. Click on the upload section to select the files from your local **or** drag and drop the files you want to upload:

Note: There is a maximum of **10 files** per import batch, files that exceed the limit will not be included in the upload. To learn more about the upload limits, click [here](#).

File Upload Rules

Batch File Limit

Validates the number of files uploaded and processed all at once, rather than uploading them one by one.

Limits:

- **10 files per batch**
- Each file can contain at least 10k records

Do not upload more than 10 files at the same time. If you have more than **100k records** it is recommended to **import via the API**.

FTP

Getting Started

TP allows you to upload data in bulk from your server every 24 hours. This works for both Excel and XML formats. Users are required to set up an Active FTP connection and the filenames to be retrieved from the server. F

Average Transfer Speed: 30 secs ~ 2 mins, may vary depending on the quality of the data

Acceptable Formats: XLSX and XML

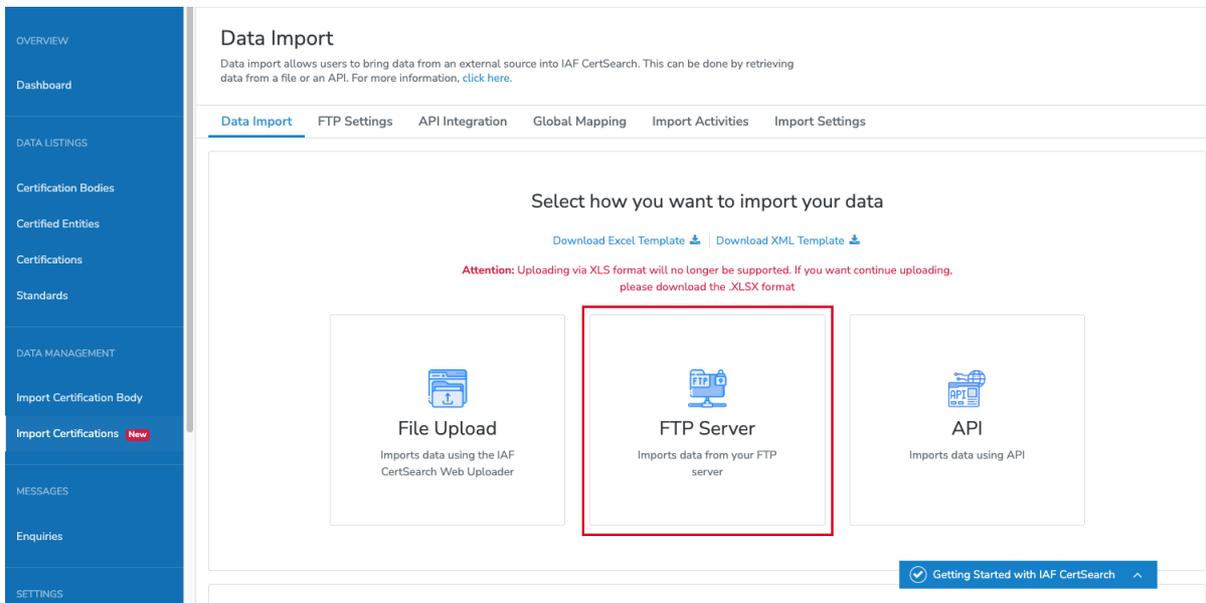

Recommended: Small, Medium, and Large Certification Bodies that have anywhere between 20 to 50,000 certifications

Prerequisites

1. Set up an Active FTP Connection
2. In your FTP server, upload files (.xlsx or XML) with your formatted data
3. Define the filenames you want to retrieve from the server

How to import data via FTP

1. go to the **Data Import** page
2. Choose '**FTP**' as your data import method

3. If an FTP connection is not yet added, you'll be asked to set it up

4. Fill out or edit the following text fields

FTP Access Status

- **Active**, continuously fetch/download the files from the FTP
- **Inactive**, stops fetching /downloading the files from the FTP

FTP Server Protocol

- **FTP**, relies on usernames and passwords for authentication
- **SFTP**, uses SSH keys for authentication, which are much more secure

Server Host

Server Port

Server Username

Server Password

- If **SFTP** is selected, add the **Private Key**

5. To check if the FTP is successfully connected, click the '**Test FTP Connection**' button.

6. Once the FTP is connected, click the '**Save and Continue**' button.

Import Management / Data Import / FTP Server

FTP Server

Import your data into IAF CertSearch through FTP Server

Configure FTP Connection

Before you upload your files please ensure that your data is ready to upload

Status Active Inactive

Protocol

Host

Port

Username

Password

7. In the next screen, add the file names you want to fetch from the FTP server

- You can tick the '**Wildcard**' option if you have multiple files in the FTP directory to be fetched with a common naming convention

i Example:

The filename is **certs** and the 'Wildcard' option is ticked.

Then, the system will look for the following filenames in the directory:

- **certs_1.xlsx**
- **2_certs.xlsx**
- **3_certs_4.xlsx**

8. Once added, click the '**Fetch Data**' button

9. Once done, the process proceeds to **Step 2** where data validation is initiated

10. Once validated, your data will successfully be added to IAF CertSearch

API

To import data through API please go to the [API Developer Guide](#):

- [Getting Started](#)
- [Authentication](#)
- [Requests](#)
- [Responses](#)
- [Errors](#)
- [Certification Body APIs](#)
- [Certification APIs](#)
- [Certified Entity APIs](#)

FTP Settings

Getting Started

In this section, you'll have the ability to manage your FTP Connections settings and the files you want to retrieve or fetch from your FTP server.

1. [Setting up an Active FTP Connection](#)
2. [Define the files](#) that should be retrieved from the FTP
3. [Fetch files](#) for data import
4. [View FTP Import Activities](#)

Setting up your FTP Connection Settings

1. Go to the **Import** page
2. From the navigation tab, click '**FTP Settings**'

Import Management / FTP Settings

FTP Settings

If you have setup the FTP in IAF CertSearch, then it will be automatically downloaded/fetched by IAF CertSearch FTP Crawler and looking for the nominated files according to account type. [View FTP Settings Instructions](#)

Test FTP Connection

Save Changes

- Server Host
- Server Port

- Server Username
 - Server Password
 - If **SFTP** is selected, add the **Private Key**
4. To check if the FTP is successfully connected, click the '**Test FTP Connection**' button.
 5. Once the FTP is connected, click the '**Save Changes**' button.

Once you are done setting up your FTP connection, the next step is to add the files you want to fetch or retrieve from the FTP servers.

Define the filenames

Defining or nominating the filenames is required so that IAF CertSearch can retrieve your data from your server into the IAF CertSearch database.

i Prerequisite

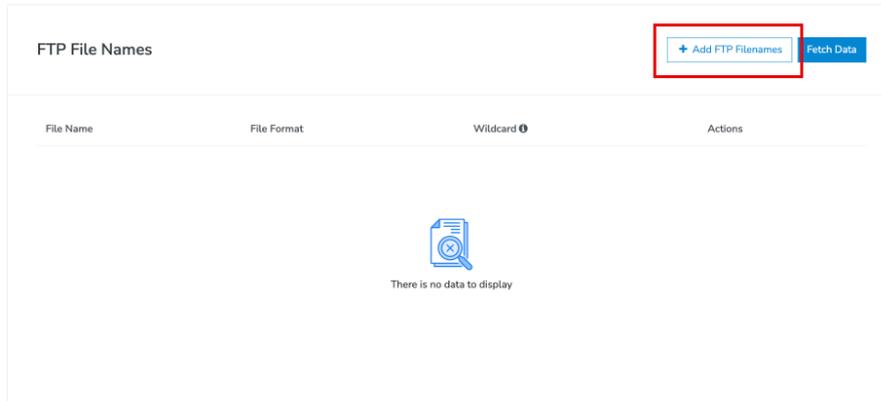

Before defining the filenames, ensure that you have uploaded the files *which contain your formatted data* into the FTP server.

1. In the FTP Settings page, go to the **FTP File Names** section

File Name	File Format	Wildcard	Actions
 There is no data to display			

2. Click, the '**Add FTP Filenames**' button
3. In the Add FTP File Name modal, add the filenames you want to retrieve.

! Make sure that your file names match the file names uploaded to your server.

- Supported characters for a filename are the following:
 - Alphanumeric characters: A-z, a-z, 0-9
 - Dashes (-)
 - Underscores (_)
 - Spaces ()
 - Forward slash, for subfolders support (/)
 - *example: cb_certs_1.xml, cb_certs_2.xlsx*
- If you want to add more than 1 filename, click the '**+ Add FTP Filename**' button
- Once completed, click the '**Submit**' button

Fetch Files from FTP

Once the files are defined, you can either choose to:

- **Fetch the files right away**, which can be done by manually clicking the '**Fetch Files**' button
- **Fetch during the FTP crawl schedule** which starts at **UTC 01:00 am daily**.

Rules

- **Any changes made to your file will be updated every 24 hours.**

- If the file names do not match, the system will not upload the file.
- Fetching the files will be skipped if there is no filename in the FTP filename section.

FTP Data Import Activities

Allows you to see all the FTP import activities.

API Integration

In this section, you'll have the ability to generate an API Key and have access to the API documentation.

To import data through API please go to the API Developer Guide:

- [Getting Started](#)
- [Authentication](#)
- [Requests](#)
- [Responses](#)
- [Errors](#)
- [Certification APIs](#)
- [Certified Entity APIs](#)

Global Mapping

This section guides you on how to manage your Global Mapping settings which include, Data Mapping and Field Mapping.

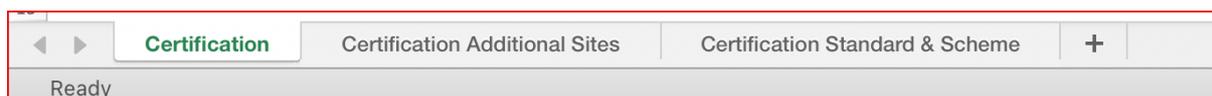

You'll have the ability to view and manage all your mapped fields and data on the Global Mapping page on their respective pages.

Resolve Data Mapping Issues

Resolve Field Mapping Issues

Field Mapping Rules

- Any unrecognized field names will not be recognized and require field mapping.
- One (1) source field **CAN'T** be mapped to multiple target fields
 - *In this example, Issue Date is mapped to Certification Issue Date and Certification Original Issue Date.*
 - **Issue Date** -> Certification Original Issue Date
 - **Issue Date** -> Certification Issue Date
- Multiple source fields values **CAN** be mapped to one (1) target field
 - *In this example, Cert Status and Status are mapped to Certification Status.*
 - **Cert Status** -> Certification Status
 - **Status** -> Certification Status
 - In Excel, renaming the sheet tab name is considered a field mapping issue

Data Mapping

The Data Mapping feature provides the ability to view and manage all your mapped data of all your import activities.

What is Data Mapping?

Data Mapping issues are caused by when the data value from the source file does not match the required data value in the IAF CertSearch database, see the example below:

[Import Management](#) / [Data Import](#) / [File Upload](#)

Field Mapping

The Field Mapping feature provides the ability to view and manage all your mapped fields of all your import activities.

What is Field Mapping?

Field Mapping issues are caused by when the field name from the source file does not match the field name in the IAF CertSearch database, see the example below:

[Import Management](#) / [Data Import](#) / [File Upload](#)

Import Activities

This page provides the ability to show all the import activities within your account. Here, you can view the following information:

- Filename
- Status
- Details
- Import Method
- Uploaded At
- Import Started
- Import Completed

Import Settings

This section provides the ability to manage your default import settings.

Automatically import data, skip data with errors

If checked, the system process your data without interruptions. The valid data will be automatically imported and the invalid data will be skipped.

If unchecked, the system requires you to resolve the issues before the data is processed for importing.

Please note that the configurations made within the Import Settings page serve as a default setting for all your file upload activities. Should you wish to change the settings in every activity you may change the settings in **Step 1** of the batch file upload.

Error Handling

Error Handling

This documentation guides you on how to handle and resolve errors during the data import process.

[Resolve Field Mapping Issues](#)

[Resolve Field Check Issues](#)

[Resolve Data Mapping Issues](#)

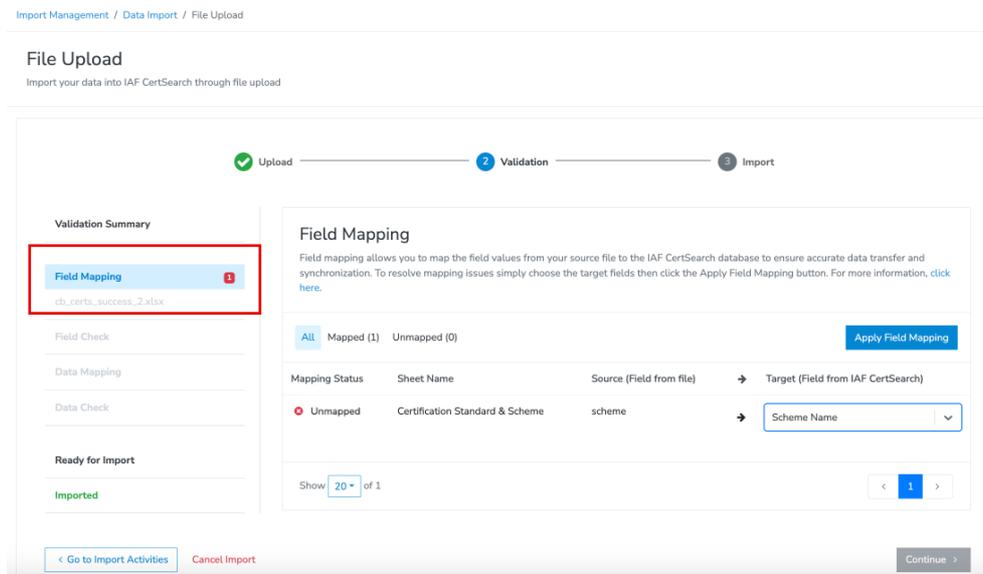

[Resolve Data Check Issues](#)

Resolve Field Mapping Issues

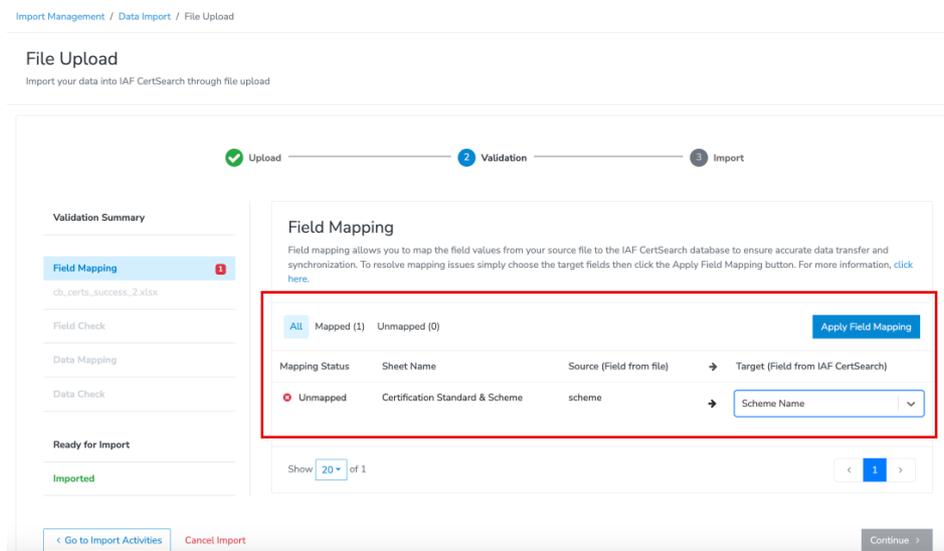

The Field Mapping issue may appear during the initial data validation process, which always takes place after selecting the files you want to upload (**Step 2 of data import**).

To Resolve Field Mapping Issues

1. Click the '**Field Mapping**' from the validation navigation within the data import process:

2. Once clicked, a list of all the fields that are unrecognized by the system is listed in the main content area.

3. In the field mapping list, you're provided with the error details such as:

i Displaying the Sheet Name is only applicable to Excel files.

Under the Target column, search or select the Field Name you want to map your source field to.

Field Mapping

Field mapping allows you to map the field values from your source file to the IAF CertSearch database to ensure accurate data transfer and synchronization. To resolve mapping issues simply choose the target fields then click the Apply Field Mapping button. For more information, [click here](#).

All Mapped (0) Unmapped (1) Apply Field Mapping

✖ Unmapped	Certification Standard & Scheme	scheme	<div style="border: 1px solid #ccc; padding: 5px;"> <input style="width: 90%; border: none;" type="text" value="Search / select target"/> <div style="border: 1px solid #ccc; background-color: #f9f9f9; padding: 5px; margin-top: 2px;"> <p style="margin: 0;">Scheme Name</p> <p style="margin: 0;">Standard Name</p> <p style="margin: 0;">Certification Identity Number</p> </div> </div>

Show of 1

Sheet Name	Sheet tab where the error is seen.
Source	The actual field name that exists from your source file, that is not recognized by the system.
Target	The field name defined in the IAF CertSearch database.

4. Once selected, click the '**Apply Field Mapping**' button to ensure that the mapped fields are submitted.
5. Once done, the system will continue validating your data. To learn more about the Data Validation Process, [click here](#).
6. If all data is valid, your data will be successfully imported.

Resolve Field Check Issues

How to resolve Field Check Issues?

1. In Step 2 of the validation process, under the Field Check navigation, click on the files listed that encountered the field check issue.
2. Read the error message and go to your Spreadsheet or XML to add the missing required field.
3. Save your file (ensure that you are uploading the same file)
4. Click the re-upload button so the system can proceed with validating the data.
5. If all data is valid, your data will be successfully imported.

To know more about Field Check, read the related articles below:

What is Field Check?

Field check is a validation process where the system checks for the required fields and sheets for Excel and missing required elements in XML.

The Fields Check issue may appear during the initial data validation process, which always takes place after selecting the files you want to upload.

File Upload

Import your data into IAF CertSearch through file upload

Field Check

Field check process validates if the mandatory field is missing from your source file. To resolve, add the missing mandatory field(s) in your source file then re-upload. For more information, [click here](#).

Missing Type	Missing Field from IAF CertSearch
Field	Standard Name

Show of 1 < 1 >

For Excel

1. **Keep the format and the order of the fields and sheets** of the provided template.
Do not REMOVE any of the fields or sheets.
2. Avoid adding unnecessary fields to the original format, for faster data processing.

If the system checks that the required fields or sheets are missing from the Excel file, the import process will be interrupted with a field check error.

For XML

1. **Keep the format and the order of the XML elements** of the provided template. **Do not REMOVE** any of the elements.
2. Avoid adding unnecessary XML tags, attributes or elements to the original format

If the system checks that the required tags, attributes or elements are missing from the XML file, the import process will be interrupted with a field check error.

Resolve Data Mapping Issues

The Data Mapping issue may appear during the initial data validation process, which always takes place after selecting the files you want to upload (**Step 2 of data import**).

To Resolve Data Mapping Issues

1. Click the **'Data Mapping'** from the validation navigation within the data import process:
2. Once clicked, a list of all the fields that are unrecognized by the system is listed in the main content area.

[Import Management](#) / [Data Import](#) / [File Upload](#)

File Upload

Import your data into IAF CertSearch through file upload

Field Name	Field Name where the data error is seen.
Source	The actual data value that exists from your source file, that is not recognized by the system.
Target	The data value defined in the IAF CertSearch database.

3. Under the Target column, search or select the dataset you want to map your source data to.

The screenshot shows a data mapping interface. At the top, there are tabs for 'All', 'Mapped (1)', and 'Unmapped (2)', along with an 'Apply Data Mapping' button. Below this is a table with the following columns: 'Mapping Status', 'Field Name', 'Source (Data Value From File)', and 'Target (Data Value from IAF CertSearch)'. The table contains three rows:

Mapping Status	Field Name	Source (Data Value From File)	Target (Data Value from IAF CertSearch)
Unmapped	Scheme	QMS	Search / select target
Unmapped	Standard	ISO 9001:2015	Environment Management System
Mapped	Standard	ISO 50001	Quality Management System

The 'Target' column for the first two rows is highlighted with a red box, and a dropdown menu is open, showing the following options: 'Search / select target', 'Environment Management System', 'Quality Management System', and 'ISO 5001:2018'.

4. Once all data mapping issues are resolved, click the '**Apply Data Mapping**' button to ensure that the mapped data are submitted.
5. Once done, the system will continue validating your data.
6. If all data is valid, your data will be successfully imported.

Resolve Data Check Issues

The Data Check issue may appear during the initial data validation process, which always takes place after selecting the files you want to upload.

What is Data Check?

Data check is a validation process where the system checks your data for the following issues:

- Missing required data
- Data duplication
- Data inconsistencies
- Data discrepancies
- Invalid data

To Resolve Data Check Issues

1. Click the '**Data Check**' from the validation navigation within the data import process:
2. Once clicked, a list of all the fields that are unrecognized by the system is listed in the main content area.

Import Management / Data Import / File Upload

Settings

Accounts

You can create multiple accounts under the Certification Body Account. The account user will be able to manage data (View, Upload, Edit and Delete) and receive enquiries from the IAF CertSearch for their specified location.

To view the accounts under your Certification Body account, click **Accounts** in the left-hand navigation. Here you can view the account information such as Account Status, Account Name, Location, Updated at and Created at.

Add Account

1. From the Dashboard, click **Accounts** in the left-hand navigation.
2. On the Accounts page, click **+ Add Account**.
3. Enter Location and Account Information.

Add Account

Account Details

Location

The City, State and Country will appear on the [Live Profile](#). Full address will be private.

Country	<input type="text" value="United States"/>
Bldg No. / Floor No. / Street *	<input type="text" value="Street Address"/>
City *	<input type="text" value="City"/>
State	<input type="text" value="State"/>
Postcode / Zipcode *	<input type="text" value="Postcode"/>

Account Information

The Account Name will appear in the enquiry form on the [Live Profile](#) and the enquiry will be sent to the email below.

Account Name *	<input type="text" value="Account Name"/>
Account Email *	<input type="text" value="Account Email"/>
Key Contact Name *	<input type="text" value="Key Contact Name"/>
Account Website	<input type="text" value="Account Website"/>

By clicking submit below, IAF CertSearch will send an activation link to the certification body email. The email holder is required to click on the link and sign up to activate the certification body.

4. Once completed, click the '**Submit**'.
5. By clicking the Submit button, IAF CertSearch will send an activation link to the account email. The email holder is required to click on the link and sign up to activate the account.

Users

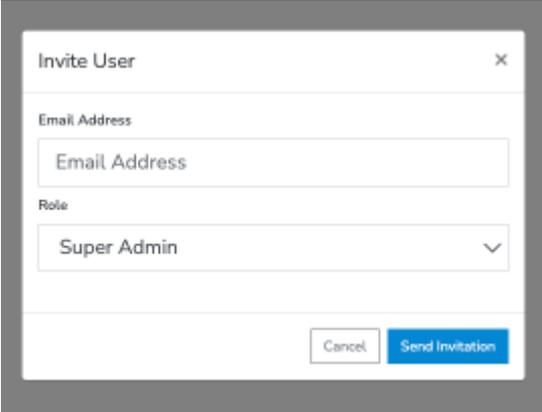

Here you can manage the users who access your account. In the Users area, you can see the users that belong to this Account. In the User area, you can view, or invite new users.

To view the users, click '**Users**' in the left-hand navigation. Here, you'll see the users list with their information such as Status, Roles, Updated at and Created at.

Invite User

To invite another user to access your account:

1. Click '**Users**' in the left-hand navigation.
2. Click the '**Invite User**' button
3. In the popup window, Input the email address and the role of the user

The image shows a 'Invite User' modal window. It features a title bar with the text 'Invite User' and a close button (X). Below the title bar, there are two input fields. The first is labeled 'Email Address' and contains the placeholder text 'Email Address'. The second is labeled 'Role' and is a dropdown menu currently showing 'Super Admin'. At the bottom right of the modal, there are two buttons: a 'Cancel' button and a 'Send Invitation' button.

4. Once invited, an invitation to activate the IAF CertSearch account will be sent to the recipient.

Delete a User

1. Click '**Users**' in the left-hand navigation.
2. Search for the user you want to delete.
3. Under the actions column, click the More button

Status	User	Role	Updated At	Created at	Actions
Pending	 mike@test.com	Super Admin	2023-08-21	2023-08-21	Resend
Active	 John Doe	Super Admin	2023-08-21	2023-07-25	Delete

4. Click the 'Delete' button
5. Once deleted, the user will no longer have access to your IAF CertSearch account.

Certification Body Profile

The Certification Body Profile page provides the ability to view and manage information about your organization. Here, you'll have access to the following:

- Certification Body Profile
- Accreditation Status
- Signed Agreements
- Live Profile

Certification Body Profile

This section has the information of the Certification Body. You can manage your logo, country/economy, website and description.

To manage your profile, [click here](#).

Accreditation Status

This section has the accreditation information of the Certification Body. You'll have access to the following information: Accredited Status, Economy, Accreditation Body, Updated at, and Activity. This page is for viewing purposes only, only the AB who accredits the CB can have access to updating and managing the accreditation information.

Signed Agreements

The Signed Agreements page provides the ability to view all your signed agreements, in which you can see the Document Name, Version, Signed by, Position and Signed date.

Live Profile

The Live Profile page links you to the Public Certification Body Profile page, where your public information such as Accreditation Information, Company Description and Office Directories are shown.

Settings

The Settings feature provides the ability to manage your user information, passwords, login authenticators and notifications.

User Settings

Where you can manage your user photo and your basic information such as First Name, Last Name, Mobile Number, Occupation and daily search frequency. To manage your user settings, click [here](#).

2-Factor Authentications

i Please note: Email guard authenticator is always required. If you happen to enable the Google Authenticator you'll just have an option which authenticator you want to use during login.

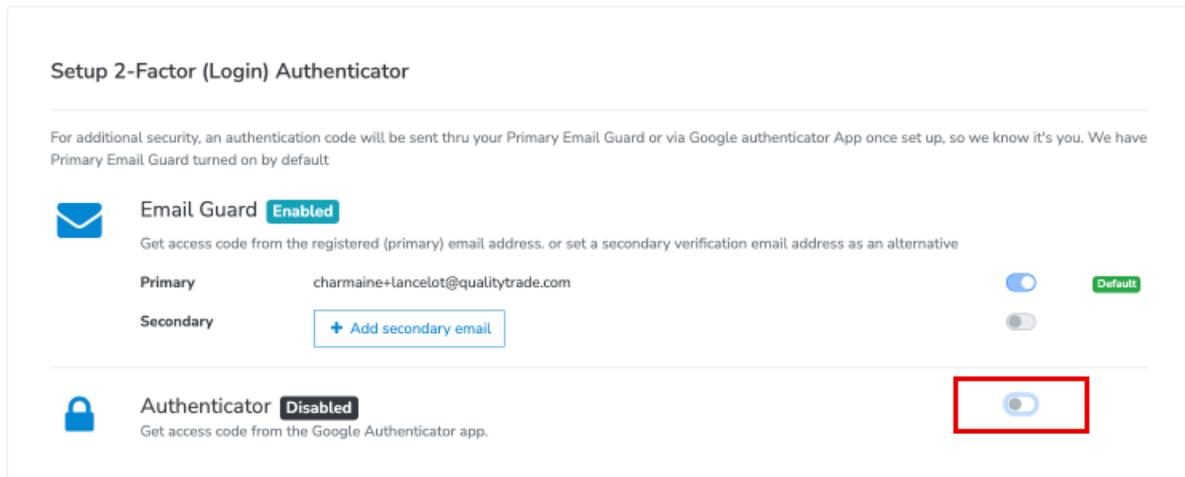

To manage your Google Authenticator:

1. You will first need to download a Google Authenticator on your mobile to use this feature.

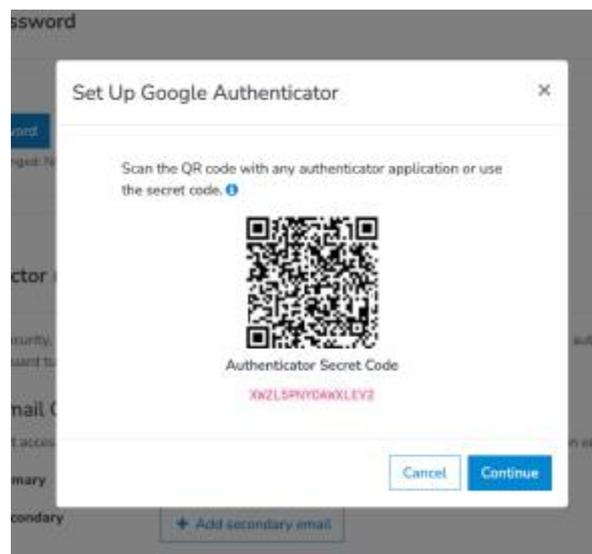

2. From the Dashboard, click '**Settings**' in the left-hand navigation.

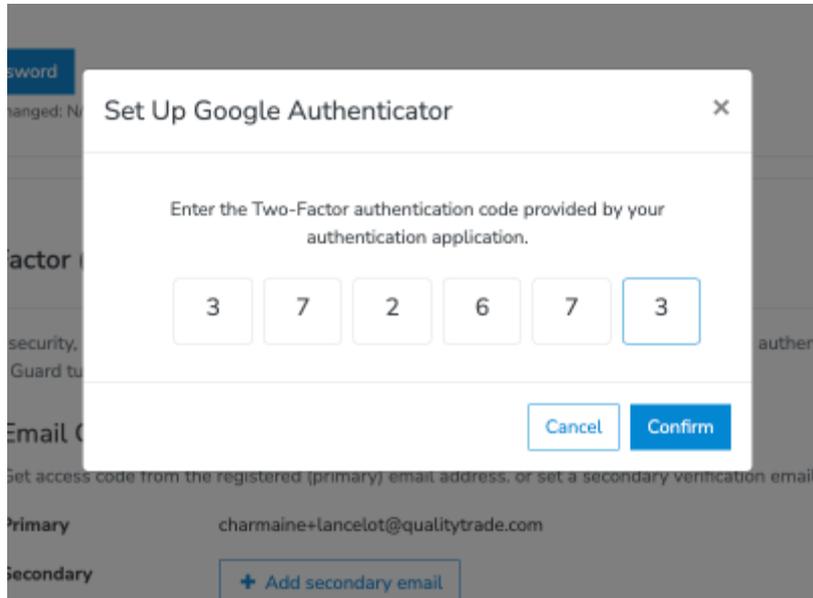

3. Click '**Security Settings**' in the menu bar.
4. Click the toggle button to enable the Google Authenticator

5. A pop-up window will appear with a QR code.
6. In your Google Authenticator app, add IAF CertSearch by scanning the QR code.

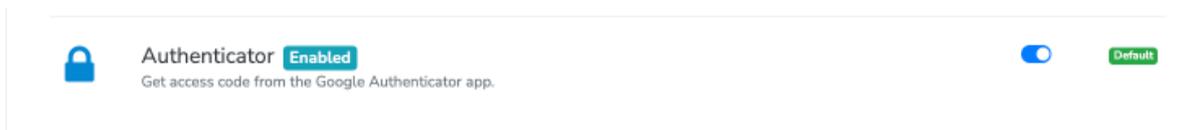

7. Once scanned click the '**Continue**' button
8. In the next screen, you will be asked to input the code which is generated from the Google Authenticator app.

9. Once added, click '**Confirm**'

10. The Google Authenticator app is now successfully enabled and is now activated every time you log in into IAF CertSearch.

Notification Settings

This feature allows you to customize the Notifications you will receive and how often you receive notifications.

Take note that if you turn off all notifications you will still receive important administrative emails such as password resets.

Alert Notifications

- General Alerts
 - Enquiry Updates - Alerts you on New Enquiries, Updates, and Activities
- Data Management
 - File Upload - Alerts you on File Uploads, Upload Status, and Error Logs
 - FTP Upload - Alerts you on File Uploads, Upload Status, and Error Logs

Email Notifications

- General Alerts
 - Enquiry Updates - Alerts you on New Enquiries, Updates, and Activities
- Data Management
 - File Upload - Alerts you on File Uploads, Upload Status, and Error Logs
 - FTP Upload - Alerts you on File Uploads, Upload Status, and Error Logs

Manage Notifications

To manage your notifications, just click on the toggle button per notification type:

Field Name Glossary

Certification Fields Glossary

This section lists down all certification data fields added in the certification templates.

Certification

Field Name		Description
Certification Identity Number	Mandatory	Unique identifier for a specific certificate. Used as a reference or a tracking number to look up certificate records in the IAF CertSearch database. <i>Example: AXB1234</i>
Certificate Number	Mandatory	Unique identifier for a specific certificate. Format of certificate numbers may vary depending on the type of certificate and the Certified Entity issuing it. <i>Example: 20897-A01</i>
Certification Status	Mandatory	Current standing of the Certified Entity's certification.

		<p>Certificate status dataset: active, inactive, hidden, cancelled, withdrawn, cbwithdrawn, suspended, pending, deleted, or expired</p> <p>Example: <i>Active</i></p>
Certification Type	Mandatory	<p>Refers to the main scope of the certificate</p> <p>Example: <i>Management Systems</i></p>
Certification Scope	Optional	<p>Specific description of the products, services, processes, or activities for which the Certified Entity has been granted certification.</p> <p>Example: <i>Manufacturing, marketing and export of instruments, consumables and accessories for temperature, active oxygen, hydrogen, carbon measurements and sampling in ferrous and non-ferrous melts</i></p>

Certification Original Issue Date	Optional	Date on which the certificate was first issued or granted to the Certified Entity <i>Example: 20191120</i>
Certification Issue Date	Mandatory	Date on which the certificate was officially issued or granted <i>Example: 20211123</i>
Certification Expiry Date	Mandatory	Date on which the validity of the certificate will come to an end. <i>Example: 20251123</i>
Certified Entity Name	Mandatory	Name of the Certified Entity, individual, product, or service that has been granted certification. <i>Example: Test Food And Logistics Inc.</i>
Certified Entity Trading Name	Optional	A trade name, trading name, or business name is a pseudonym frequently used by companies to operate under a name different from their

		<p>registered, legal name.</p> <p>In a number of countries, the phrase "trading as" (abbreviated to t/a) is used to designate a trade name.</p> <p>Example: <i>Test Food</i></p>
Certified Entity English Name	Optional	<p>English name of the Certified Entity, individual, product, or service that has been granted certification.</p> <p>Example: <i>Test Food And Logistics Inc.</i></p>
Certified Entity Unique ID	Mandatory	<p>Unique identifier for a specific Certified Entity. Used as a reference or a tracking number to look up Certified Entity records in the IAF CertSearch database.</p> <p>Example: <i>UNIQUEID-COMPANY01</i></p>
Certified Entity Street	Optional	<p>Main address of the certified entity.</p>

		Example: S108/39 E Esplanade
Certified Entity City	Optional	City of the main address of the certified entity. Example: Sydney
Certified Entity State	Optional	State of the main address of the certified entity. Example: New South Wales
Certified Entity Zipcode/Postcode	Optional	Zipcode/Postcode of the main address of the certified entity. Example: 2095
Certified Entity Country/Economy	Mandatory	Country/Economy of the main address of the certified entity. Example: Australia
Certified Entity Website	Optional	Website of the certified entity. Must be http:// or https:// Example: <i>http://testfoodlogistics.co</i>

		<i>m/</i>
TAX ID	Optional	Tax ID or VAT number of the Entity
Company ID Number	Optional	Company ID Number of the Entity
Business Registration Number	Optional	Business Registration Number of the Entity
Accreditation Body Name	Mandatory	Name of the Accreditation Body <i>Example: United Kingdom Accreditation Service</i>
Accreditation Body Acronym	Mandatory	Acronym of the Accreditation Body <i>Example: UK</i>

Certification Additional Fields

Field Name	Mandatory	Description
Certification Identity Number	Mandatory	Unique identifier for a specific certificate. Used as a reference or a tracking number to look up certificate records in the IAF CertSearch database.

		Example: AXB1234
Additional Site Street	Optional	Main address of the certified entity. Example: S108/39 E Esplanade
Additional Site City	Optional	City of the main address of the certified entity. Example: Sydney
Additional Site State	Optional	State of the main address of the certified entity. Example: New South Wales
Additional Site Zipcode/Postcode	Optional	Zipcode/Postcode of the main address of the certified entity. Example: 2095
Additional Site Country/Economy	Mandatory	Country/Economy of the main address of the certified entity. Example: Australia
Additional Site Scope	Optional	Specific description of the products, services,

		<p>processes, or activities for which the additional site has been granted certification.</p> <p>Example: <i>Design, Development, Manufacture and Services of Chemical Products, Detergent and Softeners</i></p>
--	--	---

Certifications Standard and Scheme

Field Name	Mandatory	Description
Certification Identity Number	Mandatory	<p>Unique identifier for a specific certificate. Used as a reference or a tracking number to look up certificate records in the IAF CertSearch database.</p> <p>Example: <i>AXB1234</i></p>
Scheme Name	Mandatory	<p>Specific certification program or framework to which the certificate relates.</p> <p>Example: <i>Quality</i></p>

		<i>Management Systems Scheme</i>
Standard Name	Mandatory	<p>Specific set of criteria, requirements, or guidelines that the certified entity has been assessed against and found to be in compliance with</p> <p><i>Example: ISO 9001:2008</i></p>

IAF CertSearch Dataset

Countries

Here's the list of acceptable country data from IAF CertSearch.

If your country data uses different values, you must match it to the standard country codes provided below:

Name	Code	Code_3
United States	US	USA
Canada	CA	CAN
Australia	AU	AUS
France	FR	FRA
Germany	DE	DEU
Iceland	IS	ISL
Ireland	IE	IRL
Italy	IT	ITA
Spain	ES	ESP
Sweden	SE	SWE
Austria	AT	AUT
Belgium	BE	BEL
Finland	FI	FIN
Czech Republic	CZ	CZE
Denmark	DK	DNK
Norway	NO	NOR

United Kingdom	GB	GBR
Switzerland	CH	CHE
New Zealand	NZ	NZL
Russian Federation	RU	RUS
Portugal	PT	PRT
Netherlands	NL	NLD
Isle of Man	IM	IMN
Afghanistan	AF	AFG
Aland Islands	AX	ALA
Albania	AL	ALB
Algeria	DZ	DZA
American Samoa	AS	ASM
Andorra	AD	AND
Angola	AO	AGO
Anguilla	AI	AIA
